mga Estudyanteng Pilipinong Nanimirahan sa Japan

BUNSU MASTER • NIHONGO CLEAR

Para sa Filipino Instructors

Teacning Materials in Mathematics for Filipino Students Living in Japan
Bunsuu Master Nihongo Clear
Index for Filipino Instructors

Lesson	Title	Contents for Instruction	Japanese Expressions	Page
L1	NIBUN NO ICHI SANBUN NO ICHI (One half, one third)	① To know the meaning of fraction (To express with fraction a part of something that is divided into equal parts).	① 「～NO～GA ARU.」 (There is ~ of ~.) → There is a tape which has a length of 1 meter. ② 「～NI WAKERU.」 (to divide into ~) → To divide into two. To divide into equal length. ③ 「N TOOBUN」 (dividing into N equal parts) → dividing into two equal parts ④ 「～TOKI WA, ～TO IU.」 (When ~, it is called ~.) → When it is divided into 3, it is called dividing into 3 equal parts. ⑤ 「N BUN NO 1」 → 1/3 「SANBUN NO ITI」 (1 of 3 parts) → 1/3 (one third)	1
L2	SANBUN NO NI YONBUN NO SAN (Two thirds, three fourths)	① To know that M parts of something that is divided into N equal parts is said "M part of N" and written like 2/3.	① 「～NO～GA ARU.」 (There is ~ of ~.) → There is a tape which has a length of 1 meter. ② 「N TOOBUN SURU.」 (to divide into N equal parts) → To divide into 3 equal parts. ③ 「N TSU BUN」 (N parts of) → 2 parts of ④ 「～TO IU」 (It is called ~.) 「～TO KAKU.」 (It is written like ~.) → It is called two thirds. It is written like 2/3. ⑤ 「～DE, ～DESU」 (~ and ~) → The denominator is 3 and the numerator is 2. ⑥ 「BUNSUU」 (fraction), 「BUNBO」 (denominator), 「BUNSHI」 (numerator)	7
L3	GOBUN NO GO GOBUN NO ROKU (Five fifths, six fifths)	① To know the fraction whose numerator is equal to its denominator or larger than its denominator (improper fraction).	① 「～NO～GA ARU.」 (There is ~ of ~.) → There is a tape which has a length of 1 meter. ② 「～NI IRO O NURU.」 (to color on ~) → To color on 2/3m. ③ 「～WA～TO ONAJI～DESU.」 (~ is the same ~ as ~.) → 3/3m is the same length as 1m. ④ 「～TSU BUN」 (~ parts of) → length of 3 parts ⑤ 「～DATO、～NI NARU.」 (if ~, it will become ~.) → The length is the same as 1m if the numerator and the denominator are the same. ⑥ 「SHIN BUNSUU」 (proper fraction), 「KA BUNSUU」 (improper fraction)	12
L4	ICHI TO GOBUN NO SAN (One and three fifths)	① To know mixed fraction. ② To convert improper fraction into mixed fraction and mixed fraction into improper fraction.	① 「～WA～TO～O AWASETA～DESU.」 (~ is ~ of a combination of ~ and ~.) → 6/5m is the length of a combination of 1m and 1/5m. ② 「～NO YOONI～SHITA.」 (being done ~ like ~) → Fraction written like 1 1/5 ③ 「～WA～TO ONAJI～DESU.」 (~ is the same ~ as ~.) → 3/3m is the same length as 1m. ④ 「～TO～SHITEMO II.」 (It can be also done ~.) → It can be also written like 1 1/5. ⑤ 「～NO BUN DAKE」 (only a part of ~) → Only a length of 6/5m ⑥ 「TAI BUNSUU」 (mixed fraction)	19

L5	BUNSUU NO TASHIZAN① (Addition of fractions ①)	① To understand the case where addition of fractions with the same denominators is applied. ② Method of addition of fractions with the same denominators.	① 「～TO～O AWASERUTO、～.」 (If you combine ~ and ~,) → If you combine 1/5m and 2/5m, ② 「NAN (SUUSHI) NO～NI NARUKA.」 (How many (numeral) of ~ will it be?) → How many meters of tape will it be?	25
L6	BUNSUU NO HIKIZAN ① (Subtraction of fractions ①)	① To understand the case where subtraction of fractions with the same denominators is applied. ② Method of subtraction of fractions with the same denominators.	① 「～KARA～O～SURU TO、～.」 (If you do ~ ~ from ~, ~.) → If you cut out 1/5m from 4/5m, ② 「～WO～NI KAEITE」 (to convert ~ into ~) → Convert the mixed fraction into improper fraction.	31
L7	ONAJI OOKISANO BUNSUU (Fractions with equal value)	① Fractions with equal value. ② Characteristics of fractions with equal value.	① 「～SAO KURABERU.」 (to compare in terms of ~) → To compare the value. To compare the length. ② 「～GA～NI NARUTO、～MO～.」 (If ~ becomes ~, ~ also ~.) → When the number below (denominator) doubles, the number above (numerator) also doubles.	40
L8	WARIZAN TO BUNSUU (Division and fraction)	① Relationship between division and fraction. (1) $N \div M = N/M$	① 「～O～DE ONAJI～NI WAKERUTO,」 (If ~ is divided into equal ~ by ~,) → If a 2m tape is divided into equal length by 3 persons, ② 「HONTOONI～KA」 (Is it really ~?) → Is 2/3 really the answer?	46
L9	BUNSUU TO NANBAI (Times of value and fractions)	① Relationship between division and fraction. ② To express how many times the value is with $N \div M \rightarrow N/M$ times.	① 「～WA～NO NANBAIKA.」 (how many times of ~ is ~?) → How many times of 3m is 4m? ② 「～DAKEDENAKU～DEMO」 (not only in ~ but also in ~) → Fraction can be used not only in length but also in weight.	51
L10	BUNSUU TO SHOOSUU (Fractions and decimals)	① The method to convert fraction into decimal. ② The method to convert decimal into fraction.	① 「～O～NI NAOSU.」 (to convert ~ into ~) → Convert the fraction into decimal. ② 「BUNSUU」 (fraction), 「SHOUSUU」 (decimal)	55
L11	BUNSUU NO TASHIZAN ② CHIGAU BUNBO (Addition of fractions ②) (Different denominators)	① The case where addition of fractions with different denominators is applied. ② Method of addition of fractions with different denominators.	① 「～O ONAJINI SURU.」 (to make ~ the same.) → Reduce to a common denominator and then calculate. ② 「BUNBO」 (denominator), 「BUNSHI」 (numerator) ③ 「TSUUBUN」 (reduction to a common denominator)	62
L12	BUNSUU NO HIKIZAN ② CHIGAU BUNBO (Subtraction of fractions ②) (Different denominators)	① The case where subtraction of fractions with different denominators is applied. ② Method of subtraction of fractions with different denominators.	① 「DOCHIRAGA～」 (which is ~) → Which is longer? ② 「KONOMAMADEWA～DEKINAL.」 (As it is, ~ can't be done ~.) → They can't be calculated as they are.	68
L13	YAKUBUN (Reduction)	① The meaning of reduction of fraction. ② Method to reduce fraction.	① 「～DATO OMOU」 (to think ~) → How big do you think it is? ② 「DEKIRUDAKE～SURU.」 (to do ~ as much as possible) → Find the answer with the lowest denominator as much as possible. ③ 「YAKUBUN」 (reduction) → Reduce the following fraction.	73
L14	BUNSUU NO KAKEZAN ① (Multiplication of fractions ①)	① The case where multiplication of fractions is applied. ② The method of multiplication of fractions (fraction×integer).	① 「～SHINAI～NA～.」 (~ not to do ~) → An easy way not to reduce here. ② 「CHOOHOKEI」 (rectangle), 「TATE・YOKO」 (vertical line (length) / horizontal line (width)), 「HIROSA」 (area)	79

L15	BUNSUU NO WARIZAN ① (Division of fractions ①)	①The case where division of fractions is applied. ②The method of division of fractions (fraction÷integer).	① 「N TOOBUN」 (dividing into N equal parts) → If this rectangle is divided into two equal parts ,	85
L16	BUNSUU NO KAKEZAN ② (Multiplication of fractions ②)	①The case where multiplication, fraction×fraction is applied. ②The method of multiplication, fraction×fraction.	No new contents given.	90
L17	BUNSUU NO KAKEZAN ③ (Multiplication of fractions ③)	①The case where multiplication, integer×fraction is applied. ②The method of multiplication, integer×fraction.	No new contents given.	96
L18	BUNSUU NO WARIZAN ② (Division of fractions ②)	①The case where division, fraction÷fraction is applied. ②The method of division, fraction÷fraction.	No new contents given.	101
L19	BUNSUU NO WARIZAN ③ (Division of fractions ③)	①The case where division, integer÷fraction is applied. ②The method of division, integer÷fraction.	No new contents given.	107
L20	KAKEZAN WARIZAN ISSHONI (Mix of multiplication and division)	①The method of calculation of fraction with mix of multiplication and division.	No new contents given.	112
L21	BUNSUU NO BAI ① (Times of value of fractions ①)	①It is possible to express even with fraction how many times of a certain value it is. And the method to express it.	① 「~WA~NO N BAI」 (~ is N times of ~) → 「8m WA 2m NO NANBAI DESUKA」 (How many times of 2m is 8m?) ② 「~DE~O KURABERU.」 (Compare ~ focused on ~.) → 「OMOSADE NANBAIKA O KURABETE MIMASHOO.」 (Compare them by finding how many times the weight of one is that of the other.)	117
L22	BUNSUU NO BAI ② (Times of value of fraction ②)	①The method to find 「NAMBAIKA」 "how many times of it?" by comparing fractions.	① 「~WA~NO N BAI」 (~ is ~N times of ~) → 「5/4m WA 1/2m NO NAMBAI DESUKA.」 (How many times of 1/2m is 5/4m?)	122
L23	BUNSUU BAI NO BUNSHOODAI (Word problems on times of value of fractions)	①When the relation is 「A WA B NO N BAI」 "A is N times of B", A can be found by 「B×N」 . ②To read word problem and find the value of A.	① 「~WA~NO N BAI」 (~ is ~N times of ~) → 「A (NO DAIKIN) WA B (NO DAIKIN) NO N BAI DESU.」 (The price of) A is N times of (the price of) B.)	127
L24	WARIZAN NO BUNSHOODAI ① (Word problems on division of fractions ①)	①Word problems on fraction×integer. (Word problems on the quantity of paint and the area to be able to be painted with it) ②Word problems on fraction÷integer. (Word problems on the quantity of paint and the area to be able to be painted with it)	① 「DE」 , terminology to express the unit → 「1dl DE 2/5 m ² NURERU.」 (2/5 m ² can be painted with 1dl.)	134
L25	WARIZAN NO BUNSHOODAI ② (Word problems on division of fractions ②)	①Word problems on fraction×fraction.	① 「DE」 , terminology to express the unit → 「1dl DE 4/5 m ² NURERU.」 (4/5 m ² can be painted with 1dl.)	141
L26	WARIZAN NO BUNSHOODAI ③ (Word problems on division of fractions ③)	①Word problems on fraction÷fraction.	① 「DE」 , terminology to express the unit → 「2/3dl DE 3/5m ² NURERU.」 (3/5m ² can be painted with 2/3 dl.)	147
L27	WARIZAN NO BUNSHOODAI ④ (Word problems on division of fractions ④)	①The method that can be applied to solve the word problems with fraction×fraction and fraction÷fraction in case the method explained in textbook is hard to understand.	① 「DE」 , terminology to express the unit → 「2/3dl DE 3/5m ² NURERU.」 (3/5m ² can be painted with 2/3 dl.)	155

Mga Kagamitan sa Pagtuturo sa Matematika Para sa mga Estudiyanteng Pilipinong Naninirahan sa Japa

Bunsuu Master Nihongo Clear

Mga Nilalaman Para sa mga Pilipinong Instructor

Leksiyon	Titulo	Mga Nilalaman Para sa Pagtuturo	Mga Expression sa Japanese	Page
L1	NIBUN NO ICHI SANBUN NO ICHI (One half, one third / isa ng dalawang hati, isa ng tatlong hati)	① Pag-alam sa kahulugan ng fraction. (Pagpapakilala sa paggamit ng fraction ang isang parte ng bagay na hinati ng magkatumbas)	① 「～NO～GA ARU.」 (Mayroong ~ na ~.) → Mayroong tape na 1m ang haba. ② 「～NI WAKERU.」 (hatiin sa ~) → Hatiin sa dalawa. Hatiin sa parehong haba. ③ 「N TOO BUN.」 (paghahati sa N na magkatumbas na bahagi) → paghahati sa dalawang magkatumbas na bahagi. ④ 「～TOKI WA, ～TO IU.」 (Kapag ~, ~ ang tawag.) → Paghahati sa tatlong magkatumbas na bahagi ang tawag kapag hinati sa tatlo. ⑤ 「N BUN NO 1」 (1 ng N na hati) → 1/3 「SANBUN NO ICHI」 (isa ng tatlong hati / one third)	1
L2	SANBUN NO NI YONBUN NO SAN (Two thirds, three fourths / dalawa ng tatlong hati, tatlo ng apat na hati)	① Pag-alam na ang M piraso ng hinati sa N na magkatumbas na bahagi ay sinasabing "M na bahagi ng N" at ito ay isinusulat ng "2/3".	① 「～NO～GA ARU.」 (Mayroong ~ na ~.) → Mayroong tape na 1m ang haba. ② 「N TOO BUN SURU.」 (hatiin sa N na magkatumbas na bahagi) → Hatiin sa tatlong magkatumbas na bahagi. ③ 「N TSU BUN」 (N na bahagi) → dalawang bahagi ④ 「～TO IU」 (~ ang tawag.) 「～TO KAKU.」 (~ ang pagsulat.) → Dalawa ng tatlong hati (two thirds) ang tawag. 2/3 ang pagsulat. ⑤ 「～DE, ～DESU」 (~ at ~) → 3 ang denominator at 2 ang numerator. ⑥ 「BUNSUU」 (fraction), 「BUNBO」 (denominator), 「BUNSHI」 (numerator)	7
L3	GOBUN NO GO GOBUN NO ROKU (Five fifths, six fifths / lima ng limang hati, anim ng limang hati)	① Pag-alam sa mga fraction na may parehong laki ang denominator at numerator o kaya may mas malaking numerator kaysa sa denominator(improper fraction).	① 「～NO～GA ARU.」 (Mayroong ~ na ~.) → Mayroong tape na 1m ang haba. ② 「～NI IRO O NURU.」 (kulayan ang ~.) → Kulayan ang 2/3m na bahagi. ③ 「～WA～TO ONAJI～DESU.」 (~ ay parehong ~ sa ~.) → Ang 3/3m ay parehong haba ng 1m. ④ 「～TSU BUN」 (~ bilang ng bahagi) → haba ng 3 bahagi ⑤ 「～DATO、～NI NARU.」 (Kung ~, magiging ~.) → Kung ang denominator at numerator ay magkapareho, ito ay magiging kapareho ng haba ng 1m. ⑥ 「SHIN BUNSUU」 (proper fraction), 「KA BUNSUU」 (improper fraction)	12
L4	ICHI TO GOBUN NO SAN (One and three fifths / isa at tatlo ng limang hati)	① Pag-alam sa mga mixed fraction. ② Pagpapalit ng improper fraction sa mixed fraction o kaya mixed fraction sa improper fraction.	① 「～WA～TO～O AWASETA～DESU.」 (Ang ~ ay ~ ng pinagsamang ~ at ~.) → Ang 6/5m ay haba ng pinagsamang 1m at 1/5m. ② 「～NO YOONI～SHITA.」 (Ginawang ~ kagaya ng ~.) → Fraction na isinulat kagaya ng 1 1/5. ③ 「～WA～TO ONAJI～DESU.」 (~ ay parehong ~ sa ~.) → Ang 3/3m ay parehong haba ng 1m. ④ 「～TO～SHITEMO II.」 (~ ay maisasagawa din ng ~.) → Maisusulat din ng 1 1/5. ⑤ 「～NO BUN DAKE」 (ang parte ng ~ lamang) → Haba na 6/5m lamang. ⑥ 「TAI BUNSUU」 (mixed fraction)	19

L5	BUNSUU NO TASHIZAN ① (Addition ng fraction ①)	① Pag-unawa sa addition ng fraction na may parehong denominator. ② Paraan ng addition ng fraction na may parehong denominator.	① 「～TO～O AWASERUTO、～.」 (Kapag ~ at ~ ay pinagsama,) → Kapag ang 1/5m at 2/5m ay pinagsama, ② 「NAN (SUUSHI) NO～NI NARUKA.」 (ilang (numeral) na ~ magiging?) → Magiging ilang metrong tape ito?	25
L6	BUNSUU NO HIKIZAN ① (Subtraction ng fraction ①)	① Pag-unawa sa subtraction ng fraction na may parehong denominator. ② Paraan ng subtraction ng fraction na may parehong denominator.	① 「～KARA～O～SURU TO、～.」 (Kapag isinagawa ~ mula sa ~ ang ~, ~.) → Kapag ginupit ang 1/5m mula sa 4/5m, ② 「～O～NI KAETE」 (palitan ang ~ sa ~) → Palitan ang mixed fraction sa improper fraction.	31
L7	ONAJI OOKISANO BUNSUU (Magkatumbas na fraction)	① Mga fraction na magkatumbas ang laki. ② Katangian ng mga fraction na magkatumbas ang laki.	① 「～SA O KURABERU.」 (ihambing ang ~.) → Ihambing ang laki. Ihambing ang haba. ② 「～GA～NI NARUTO、～MO～.」 (Kapag ang ~ ay naging ~, ang ~ ay ~ din.) → Kapag ang bilang na nasa ibaba ng fraction (denominator) ay naging doble, ang bilang na nasa itaas (numerator) ay magiging doble din.	40
L8	WARIZAN TO BUNSUU (Division at fraction)	① Kaugnayan ng division at fraction (1) $N \div M = N/M$	① 「～O～DE ONAJI～NI WAKERUTO.」 (Kapag hinati ang ~ ng ~ sa parehong ~,) → Kapag ang 2m na tape ay hinati ng 3 tao sa parehong haba, ② 「HONTOONI～KA」 (talaga bang ~?) → Talaga bang 2/3 ang sagot?	46
L9	BUNSUU TO NANBAI (Fraction at ilang beses ang laki)	① Kaugnayan ng division at fraction (2) Ipakita kung ilang beses ang laki sa gamit ng $N \div M$. → N/M beses.	① 「～WA～NO NANBAIKA.」 (ilang beses ng ~ ang ~?) → Ilang beses ng 3m ang 4m? ② 「～DAKEDENAKU～DEMO」 (hindi lamang sa ~ kundi sa ~din) → Magagamit ang fraction hindi lamang sa haba kundi sa bigat din.	51
L10	BUNSUU TO SHOOSUU (Fraction at decimal)	① Paraan sa pagpapalit ng fraction sa decimal. ② Paraan sa pagpapalit ng decimal sa fraction.	① 「～O～NI NAOSU.」 (ayusin ang ~ sa ~.) → Ayusin ang fraction sa decimal. ② 「BUNSUU」 (fraction), 「SHOUSUU」 (decimal)	55
L11	BUNSUU NO TASHIZAN ② CHIGAU BUNBO (Addition ng fraction ② magkaibang denominator)	① Pag-unawa sa addition ng fraction na may magkaibang denominator. ② Paraan ng addition ng fraction na may magkaibang denominator.	① 「～O ONAJINI SURU.」 (gawing pareho ang ~.) → Gawing pareho ang denominator at kalkulahin. ② 「BUNBO」 (denominator), 「BUNSHI」 (numerator) ③ 「TSUUBUN」 (mag-reduce sa magkaparehong denominator)	62
L12	BUNSUU NO HIKIZAN ② CHIGAU BUNBO (Subtraction ng fraction ② magkaibang denominator)	① Pag-unawa sa subtraction ng fraction na may magkaibang denominator. ② Paraan ng subtraction ng fraction na may magkaibang denominator.	① 「DOCHIRAGA～」 (alin ang ~) → Alin ang mas mahaba? ② 「KONOMAMADEWA～DEKINAL.」 (Hindi maaaring ~ sa ganito lamang.) → Hindi maaaring kalkulahin sa ganito lamang.	68
L13	YAKUBUN (Reduction / pagpaliit ng fraction)	① Kahulugan ng reduction ng fraction. ② Paraan ng reduction ng fraction.	① 「～DATO OMOU」 (~ sa palagay ng) → Gaano kalaki sa palagay mo? ② 「DEKIRUDAKE～SURU.」 (gawin ~ hanggang maaari) → Sagutan hanggang maaari sa pinakamaliit na denominator. ③ 「YAKUBUN」 (reduction) → Paliitin ang mga sumusunod na fraction. / Mag-reduce ng mga sumusunod na fraction.	73
L14	BUNSUU NO KAKEZAN ① (Multiplication ng fraction ①)	① Kalagayan kung saan ginagamit ang multiplication ng fraction. ② Paraan ng multiplication ng fraction (fraction×integer).	① 「～SHINAI～NA～.」 (~ na ~ na hindi gagawin ang ~.) → Madaling paraan na hindi gagawin dito ang reduction. ② 「CHOOKOKEI」 (rectangle), 「TATE・YOKO」 (patayong linya, pahalang na linya), 「HIROSA」 (kalawakan)	79

L15	BUNSUU NO WARIZAN ① (Division ng fraction ①)	① Kalagayan kung saan ginagamit ang division ng fraction. ② Paraan ng division ng fraction (fraction÷integer).	① 「N TOOBUN」 (paghahati sa N na magkatumbas na bahagi) → Kung hahatiin ang rectangle na ito sa 2 magkatumbas na bahagi,	85
L16	BUNSUU NO KAKEZAN ② (Multiplication ng fraction ②)	① Kalagayan kung saan ginagamit ang multiplication, fraction×fraction. ② Paraan ng multiplication, fraction×fraction.	Walang mga nilalaman na bagong labas.	90
L17	BUNSUU NO KAKEZAN ③ (Multiplication ng fraction ③)	① Kalagayan kung saan ginagamit ang multiplication, integer×fraction. ② Paraan ng multiplication, integer×fraction.	Walang mga nilalaman na bagong labas.	96
L18	BUNSUU NO WARIZAN ② (Division ng fraction ②)	① Kalagayan kung saan ginagamit ang division, fraction÷fraction. ② Paraan ng division, fraction÷fraction.	Walang mga nilalaman na bagong labas.	101
L19	BUNSUU NO WARIZAN ③ (Division ng fraction ③)	① Kalagayan kung saan ginagamit ang division, integer÷fraction. ② Paraan ng division, integer÷fraction.	Walang mga nilalaman na bagong labas.	107
L20	KAKEZAN WARIZAN ISSHONI (Pinagsamang multiplication at division)	① Paraan ng pagkalkula ng fraction na may magkasamang division at multiplication.	Walang mga nilalaman na bagong labas.	112
L21	BUNSUU NO BAI ① (Times of value of fraction / beses ng laki ng fraction ①)	① Pagpapakilala at pag-alam na maaari ding maipakita ang ilang beses ang laki sa gamit ng fraction. At paraan ng pagpakita nito.	① 「～WA～NO N BAI」 (N na beses na laki ng ~ ang ~.) → 「8m WA 2m NO NANBAI DESUKA」 (Ilang beses na laki ng 2m ang 8m?) ② 「～DE～O KURABERU.」 (ihambing ang ~ sa pamamagitan ng ~.) → 「OMOSADE NANBAIKA O KURABETE MIMASHOO.」 (ihambing kung ilang beses ng bigat ng isa ang bigat ng isa pa.)	117
L22	BUNSUU NO BAI ② (Times of value of fraction / beses ng laki ng fraction ②)	① Paraan ng paghanap ng 「NAMBAIKA」 "ilang beses ang laki" sa paghahambing ng mga fraction.	① 「～WA～NO N BAI」 (N na beses na laki ng ~ ang ~.) → 「5/4m WA 1/2m NO NANBAI DESUKA.」 (Ilang beses ng 1/2m ang 5/4m?)	122
L23	BUNSUU BAI NO BUNSHOODAI (Mga word problem sa beses ng laki ng fraction)	① Kung ang relasyon na ipinakikita ay 「A WA B NO N BAI」 "Ang A ay N na beses ng B", ang A ay makukuha sa 「B×N」. ② Pagbasa ng word problem at paghahanap ng halaga ng A.	① 「～WA～NO N BAI」 (N na beses na laki ng ~ ang ~.) → 「A (NO DAIKIN) WA B (NO DAIKIN) NO N BAI DESU.」 ((Ang halaga ng) A ay N na beses ng (halaga ng) B.)	127
L24	WARIZAN NO BUNSHOODAI ① (Mga word problem sa division ng fraction ①)	① Mga word problem sa fraction×integer. (Problema na tumatalakay sa dami ng pinta at laki ng sukat na mapipintahan sa gamit ng pintang iyan.) ② Mga word problem sa fraction÷integer. (Problema na tumatalakay sa dami ng pinta at laki ng sukat na mapipintahan sa gamit ng pintang iyan.)	① 「DE」 na ginagamit upang maituro ang unit / pamantayan. → 「1dl DE 2/5 m ² NURERU.」 (Mapipintahan ang 2/5m ² sa gamit ng 1dl.)	134
L25	WARIZAN NO BUNSHOODAI ② (Mga word problem sa division ng fraction ②)	① Mga word problem sa fraction×fraction.	① 「DE」 na ginagamit upang maituro ang unit / pamantayan. → 「1dl DE 4/5 m ² NURERU.」 (Mapipintahan ang 4/5m ² sa gamit ng 1dl.)	141
L26	WARIZAN NO BUNSHOODAI ③ (Mga word problem sa division ng fraction ③)	① Mga word problem sa fraction÷fraction.	① 「DE」 na ginagamit upang maituro ang unit / pamantayan. → 「2/3dl DE 3/5 m ² NURERU.」 (Mapipintahan ang 3/5m ² sa gamit ng 2/3dl.)	147
L27	WARIZAN NO BUNSHOODAI ④ (Mga word problem sa division ng fraction ④)	① Magagamit na paraan sa paglutas ng mga word problem sa fraction×fraction o fraction÷fraction kung sakaling mahirap maintindihan ang paglutas na itinuturo sa textbook.	① 「DE」 na ginagamit upang maituro ang unit / pamantayan. → 「2/3dl DE 3/5 m ² NURERU.」 (Mapipintahan ang 3/5m ² sa gamit ng 2/3dl.)	155

在日フィリピン人児童のための算数教材 分数マスター・日本語クリアー
Mga Kagamitan sa Pagtuturo sa Matematika Para sa mga Estudiyanteng Pilipinong Naninirahan sa Japan
BUNSUU MASTER NIHONGO CLEAR

1課 / Lesson 1 / Leksyon 1

ようごとぶん / Words and phrases / Mga Salita

ようご	Words	Mga salita
おなじ	same	pareho
ながさ	length	haba
わける	to divide / to regroup	hatiin
ぶん	number of plates / times / portions /servings / parts	parte / bahagi
2とうぶん	dividing two equal parts	paghahati sa dalawang magkatumbas na bahagi
2ぶんの1	one half	kalahati / isa ng dalawang hati
いろ	color	kulay
ぬる	to paint / to color	kulayan
かく	to write	isulat

ぶん	Phrases	Grupo ng mga salita
おなじ ながさに わけます。	Divide into the same length.	Hatiin sa magkaparehong haba.
テープ1つぶんの ながさ	length of the measure of one piece of a tape	haba ng isang sukat ng tape
2分の1mだけ いろを ぬります。	Color / Paint only 1/2 (one half) meter.	Kulayan lamang ang 1/2 (kalahating) metro.
「2ぶんの1」を 1/2 と かきます。	"One half" is written like 1/2.	Ang isa ng dalawang hati ay isinusulat ng 1/2 .

【内容】 Contents Mga Nilalaman

- | |
|-------------------------------------------------------------------------------------------------------------------------------|
| ①分数の意味（ある物を等分した1つ分を分数で表わすこと）を知る。 |
| ①To know the meaning of fraction (To express with fraction a part of something that is divided into equal parts). |
| ①Pag-alam sa kahulugan ng fraction. (Pagpapakilala sa paggamit ng fraction ang isang parte ng bagay na hinati ng magkatumbas) |

【日本語の表現】 Math Expressions in Japanese Mga Math Expressions sa Japanese

- | |
|----------------------------------------------------------------------------------------------------------------------------|
| ① 「～の～がある。」 → 1 mの長さのテープがあります。 |
| ② 「～に分ける。」 → 2つに分ける。同じ長さに分ける。 |
| ③ 「N等分」 → 2等分 |
| ④ 「～ときは、～という」 → 3つに分けるときは、3等分といいます。 |
| ⑤ 「N分の1」 → 3分の1 |
| ① 「～NO～GA ARU.」(There is ~ of ~.) → There is a tape which has a length of 1 meter. |
| ② 「～NI WAKERU.」(to divide into~) → To divide into two. To divide into equal length. |
| ③ 「N TOOBUN」(dividing into N equal parts) → dividing into two equal parts |
| ④ 「～TOKI WA、～TO IU.」 (When ~, it is called ~.) → When it is divided into 3, it is called dividing into 3 equal parts. |
| ⑤ 「N BUN NO 1」→1/3「SANBUN NO ITI」(1 of 3 parts) → 1/3 (one third) |
| ① 「～NO～GA ARU.」(Mayroong ~ na ~ .) → Mayroong tape na 1m ang haba. |
| ② 「～NI WAKERU.」(hatiin sa～) → Hatiin sa dalawa. Hatiin sa parehong haba. |
| ③ 「N TOOBUN.」 (paghahati sa N na magkatumbas na bahagi) → paghahati sa dalawang magkatumbas na bahagi. |
| ④ 「～TOKI WA、～TO IU.」 (Kapag ~, ~ ang tawag.) → Paghahati sa tatlong magkatumbas na bahagi ang tawag kapag hinati sa tatlo. |
| ⑤ 「N BUN NO 1」 (1 ng N na hati) → 1/3 「SANBUN NO ICHI」 (isa ng tatlong hati / one third) |

1

There is a tape with 1m long.

Mayroong tape na 1m ang haba.

Divide this into 2.

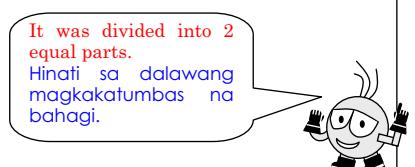

Hatiin ito sa dalawa.

Divide with the same length each.

Hatiin sa magkaparehong haba.

To divide like this is called "NI TOUBUN",
to divide into 2 equal parts.

Ang paghahati katulad nito ay
tinatawag na "NI TOUBUN", paghahati sa
2 magkakatumbas na bahagi.

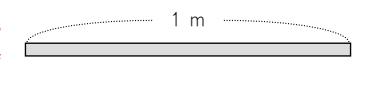

① To divide into 3 with the same length each is
called "SAN TOUBUN", to divide into 3 equal
parts.

Kapag hinati sa 3 magkakatumbas na haba
ay tinatawag na "SAN TOUBUN", paghahati
sa 3 magkakatumbas na bahagi.

② To divide into 4 with the same length each is
called "YONTOU TOUBUN", to divide into 4
equal parts.

Kapag hinati sa 4 magkakatumbas na haba
ay tinatawag na "YONTOU TOUBUN",
paghahati sa 4 magkakatumbas na
bahagi.

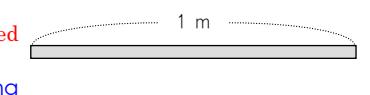

③ To divide into 5 with the same length each is
called "GO TOUBUN", to divide into 5 equal
parts.

Kapag hinati sa 5 magkakatumbas na haba
ay tinatawag na "GO TOUBUN", paghahati
sa 5 magkakatumbas na bahagi.

④ What ("NAN TOUBUN") do you think it is called
to divide into 6 with the same length each?

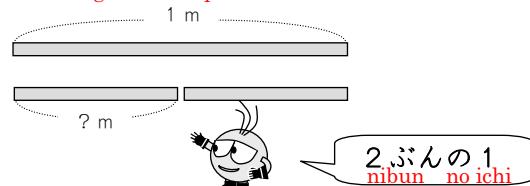

Ano ("NAN TOUBUN") ang tawag sa iyong
palagay kapag hinati sa 6 na
magkakatumbas na haba?

2

④ 5とうぶんしたものの1つを「？」といいます。

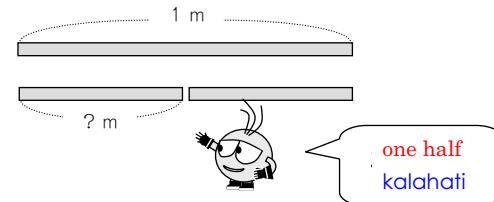

⑤ 6とうぶんしたものの1つを「？」といいます。

2

等分したときの1つ分の大きさを分数で表わすことを知る。

A tape with 1m long was divided into 2 equal parts.
Ang 1m na tape ay hinati sa 2 magkakatumbas na haba.

The length of the shorter tape is called "one half", 1/2.
Ang haba ng isang pirasong maikling tape ay tinatawag na "kalahating / one half" m.

One of the two, whose original was divided into 2 equal parts is called "one half", 1/2.

① Ang isang bahagi ng hinati sa dalawang magkakatumbas na bahagi ay tinatawag na "kalahati, 1/2".

One of the three, whose original was divided into 3 equal parts is called "one third", 1/3.

② Ang isang bahagi ng hinati sa tatlong magkakatumbas na bahagi ay tinatawag na "isa ng tatlong hati, 1/3".

One of the four, whose original was divided into 4 equal parts is called "one fourth", 1/4.

③ Ang isang bahagi ng hinati sa apat na magkakatumbas na bahagi ay tinatawag na "isa ng apat na hati, 1/4".

One half, one third, one fourth, so...
Kalahati, isa ng tatlong hati, isa ng apat na hati, kaya...

One of the five, whose original was divided into 5 equal parts is called "one fifth", 1/5.

④ Ang isang bahagi ng hinati sa limang magkakatumbas na bahagi ay tinatawag na "isa ng limang hati, 1/5".

One of the six, whose original was divided into 6 equal parts is called "one sixth", 1/6.

⑤ Ang isang bahagi ng hinati sa anim na magkakatumbas na bahagi ay tinatawag na "isa ng anim na hati, 1/6".

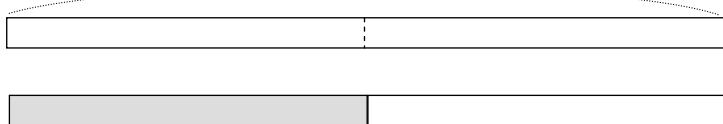

3

「分数」「分母」「分子」という言葉を知る。

Numbers such as $1/3$ and $2/5$ are called fraction.

Ang mga bilang katulad ng $1/3$ at $2/5$ ay tinatawag na fraction.

The number below the — (line) is called denominator

Ang bilang na nasa baba ng — (linya) ay tinatawag na denominator.

The number above the — (line) is called numerator.

Ang bilang na nasa itaas ng — (linya) ay tinatawag na numerator.

fraction

$$\frac{1}{3} \quad \frac{2}{5}$$

$$\frac{5}{6} \quad \frac{3}{5}$$

The number above is "numerator."
Ang bilang na nasa itaas ay "numerator."
The number below is "denominator."
Ang bilang na nasa baba ay "denominator."

$$\frac{2}{5}$$

Say the denominators and the numerators of the following fractions.

Sabihin ang denominator at numerator ng mga sumusunod na fraction.

① The denominator is □ and the numerator is □ of $1/3$.
Ang denominator ay □ at ang numerator ay □ ng $1/3$.

② The denominator is □ and the numerator is □ of $3/5$.
Ang denominator ay □ at ang numerator ay □ ng $3/5$.

③ The □□□ is 4 and the □□□ is 7 of $4/7$.
Ang □□□ ay 4 at ang □□□ ay 7 ng $4/7$.

4課/Lesson 4/Leksyon 4

【内容】 Contents Mga Nilalaman

① 帯分数について知る。
② 仮分数を帯分数に直したり、帯分数を仮分数に直したりする。
① To know mixed fraction.
② To convert improper fraction into mixed fraction and mixed fraction into improper fraction.
① Pag-alam sa mga mixed fraction.
② Pagpapalit ng improper fraction sa mixed fraction o kaya mixe dfracion sa improper fraction.

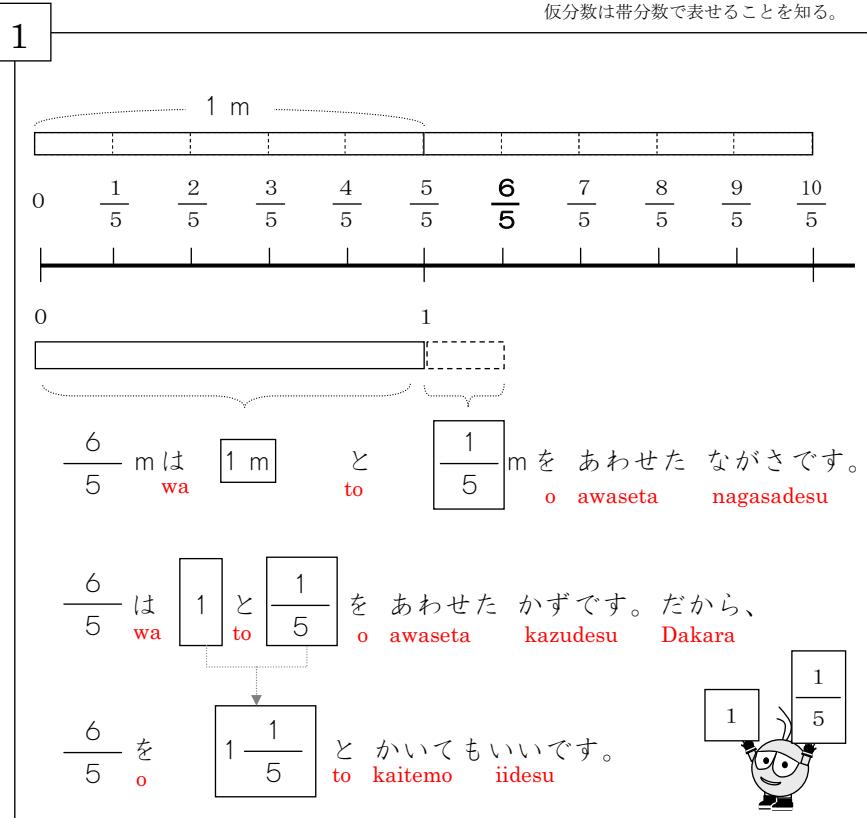

【日本語の表現】 Math Expressions in Japanese Mga Math Expressions sa Japanese

① 「～は～と～を合わせた～です。」 → 6/5は1mと1/5mを合わせた長さです。
② 「～のように～した。」 → 1 1/5のように書いた分数
③ 「～は～と同じ～です。」 → 3/3mは、1mと同じ長さです。
④ 「～と～してもいい。」 → 1 1/5と書いてもいい
⑤ 「～のぶんだけ」 → 6/5mの長さの分だけ
⑥ 「帯分数」
① 「～WA～TO～O AWASETA～DESU.」 (～ is ~ of a combination of ~ and ~.) → 6/5m is the length of a combination of 1m and 1/5m.
② 「～NO YOONI～SHITA.」 (being done ~ like ~) → Fraction written like 1 1/ 5
③ 「～WA～TO ONAJI～DESU.」 (～ is the same ~ as ~.) → 3/3m is the same length as 1m.
④ 「～TO～SHITEMO II.」 (It can be also done ~.) → It can be also written like 1 1/ 5.
⑤ 「～NO BUN DAKE」 (only a part of ~) → Only a length of 6/5m
⑥ 「TAI BUNSUU」 (mixed fraction)
① 「～WA～TO～O AWASETA～DESU.」 (Ang ~ ay ~ ng pinagsamang ~ at ~.) → Ang 6/5m ay haba ng pinagsamang 1m at 1/5m.
② 「～NO YOONI～SHITA.」 (Ginawang ~ kagaya ng ~.) → Fraction na isinulat kagaya ng 1 1/ 5.
③ 「～WA～TO ONAJI～DESU.」 (～ ay parehong ~ sa ~.) → Ang 3/3m ay parehong haba ng 1m.
④ 「～TO～SHITEMO II.」 (～ ay malsasagawa din ng ~.) → Maisusulat din ng 1 1/ 5.
⑤ 「～NO BUN DAKE」 (ang parte ng ~ lamang) → Haba na 6/5m lamang.
⑥ 「TAI BUNSUU」 (mixed fraction)

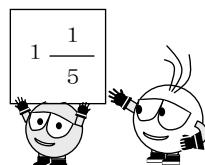

4 1と5ぶんの3

Ichi to gobun no san

$1\frac{1}{5}$ のように かいた ぶんすうを たいぶんすう といいます。
no yoo ni kaita bunsuu o taibunsuu to iimasu

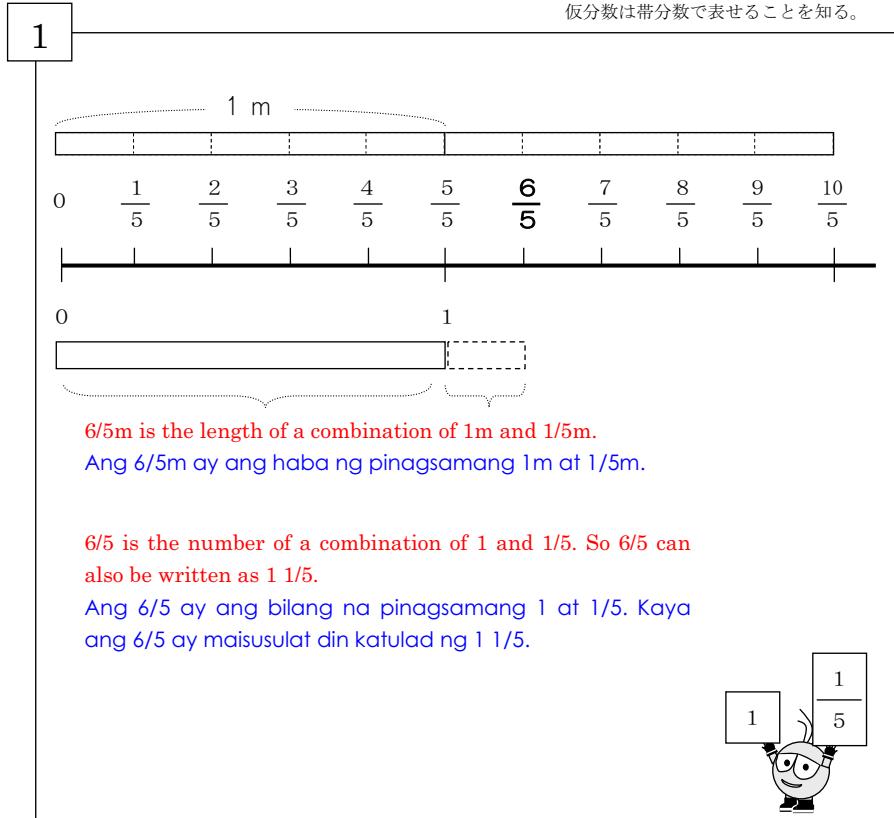

「1と5ぶんの1」と よみます。
"Ichi to gobun no ichi" to yomimasu
 1 と $\frac{1}{5}$
ichi to gobun no ichi

4 1と5ぶんの3

仮分数は帯分数で表せることを知る。

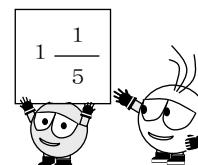

Fractions those are written such as $1\frac{1}{5}$ are called mixed fractions.

Ang mga fraction na nakasulat katulad ng $1\frac{1}{5}$ ay tinatawag na mixed fraction.

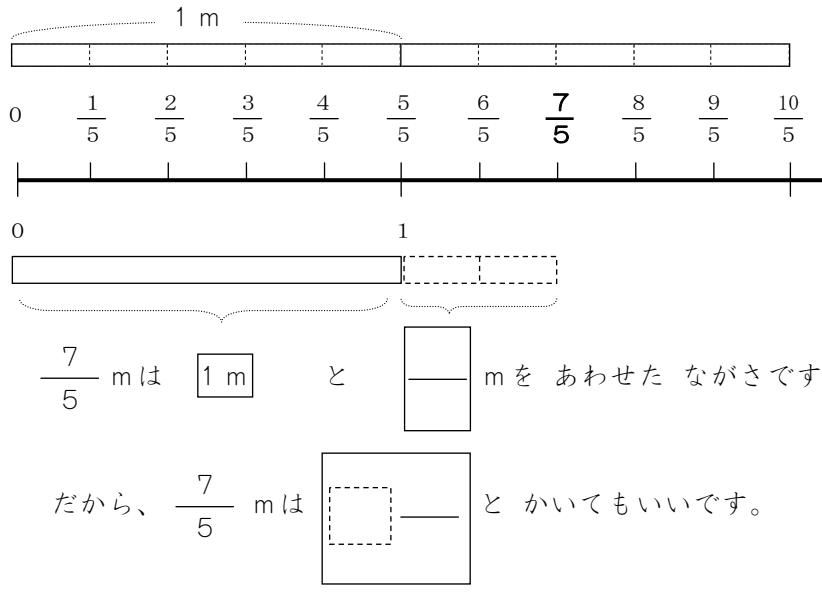

It is read one and one fifth ($1\frac{1}{5}$).

Ang basa nito ay "isa at isa ng 5 hati / one and one fifth".

2

仮分数を帯分数で表してみる。

① $\frac{8}{5}$ m は 1 m と m を あわせた ながさです。

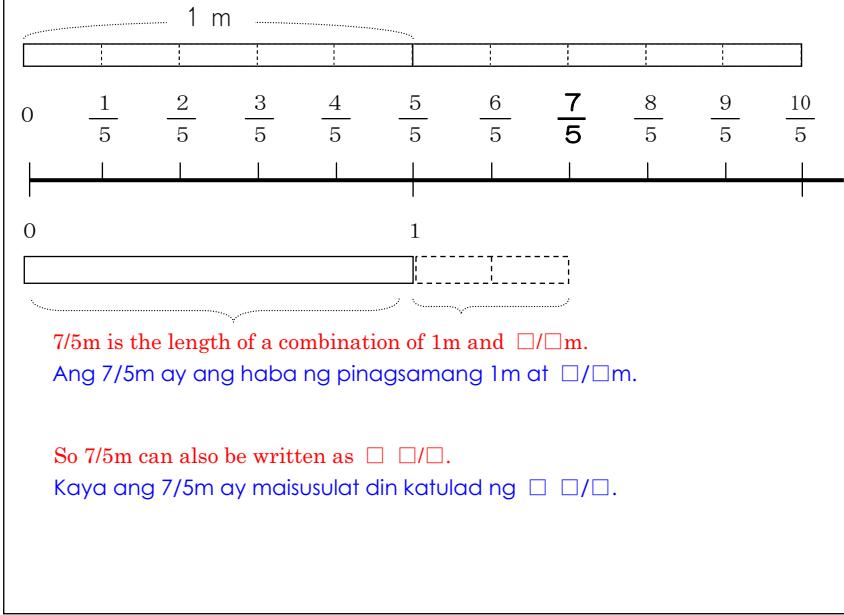

だから、 $\frac{8}{5}$ m は と かいてもいいです。

② $\frac{9}{5}$ m は 1 m と m を あわせた ながさです。

だから、 $\frac{9}{5}$ m は と かいてもいいです。

2

仮分数を帯分数で表してみる。

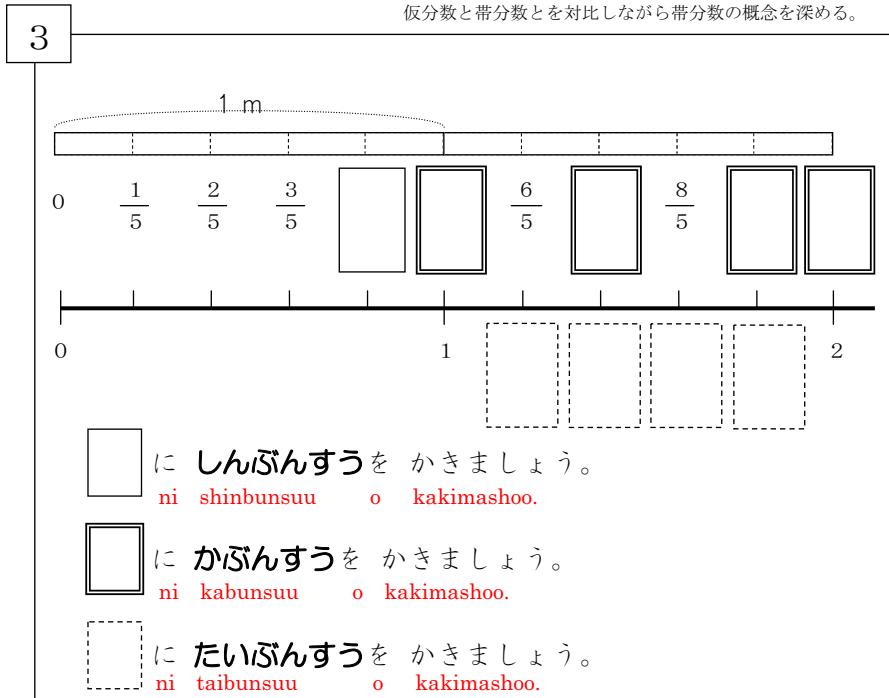

① $\frac{8}{5}$ m is the length of a combination of 1m and m.
Ang $\frac{8}{5}$ m ay ang haba ng pinagsamang 1m at m.

So $\frac{8}{5}$ m can also be written as .
Kaya ang $\frac{8}{5}$ m ay maisusulat din katulad ng .

② $\frac{9}{5}$ m is the length of a combination of 1m and m.
Ang $\frac{9}{5}$ m ay ang haba ng pinagsamang 1m at m.

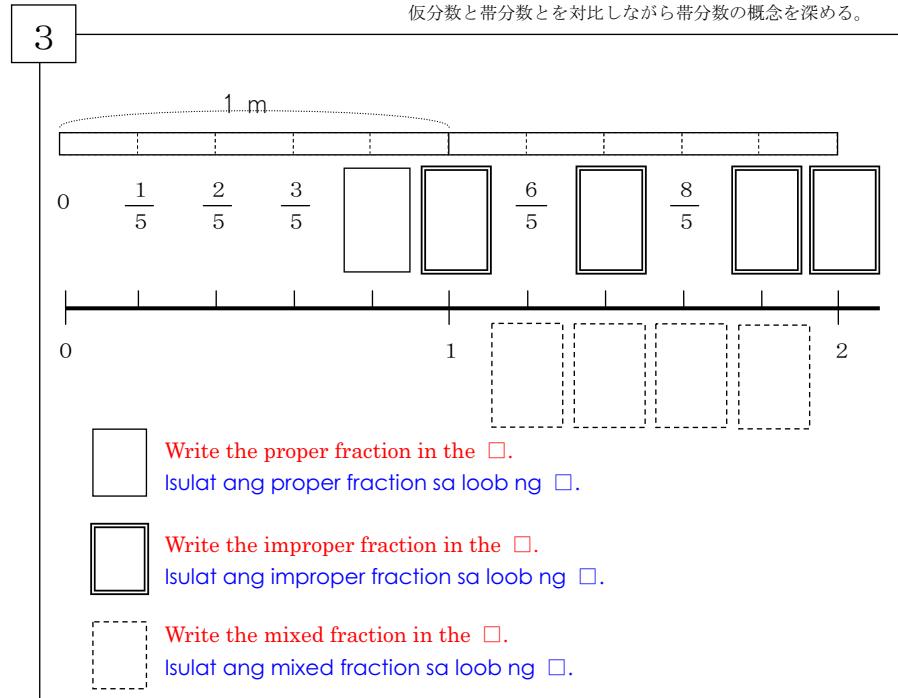

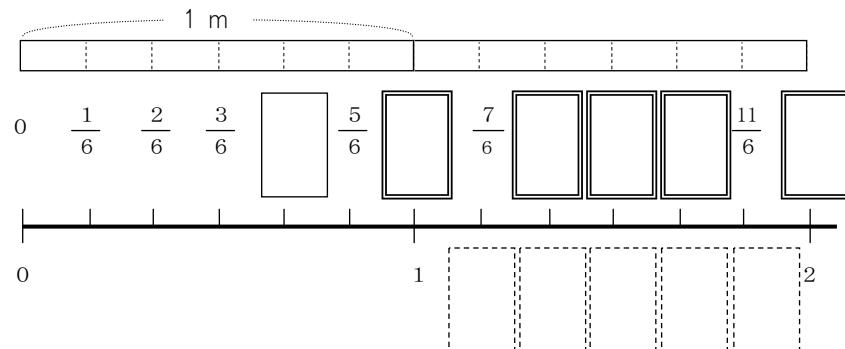

So $\frac{9}{5}$ m can also be written as .
Kaya ang $\frac{9}{5}$ m ay maisusulat din katulad ng .

3 の もんだいと おなじように、

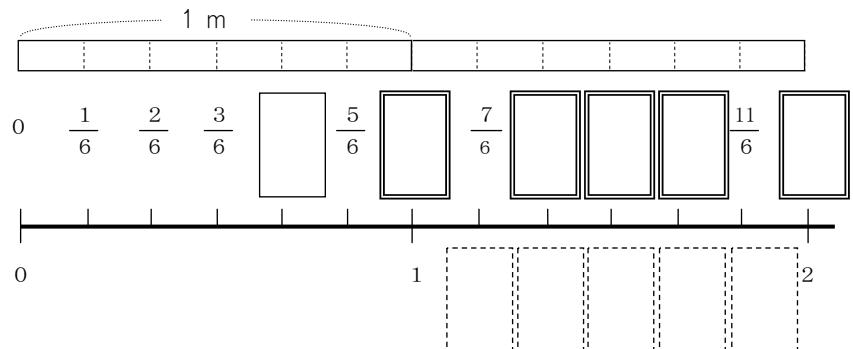

no mondai to onajiyoo ni,

しんぶんすう、かぶんすう、たいぶんすうを かきましょう。
shinbunsuu, kabunsuu, taibunsuu o kakimashoo.

Write the proper fraction, improper fraction and mixed fraction in the same way as in question 3 above.

Isulat ang proper fraction, improper fraction at mixed fraction katulad ng suliranin sa 3 sa taas.

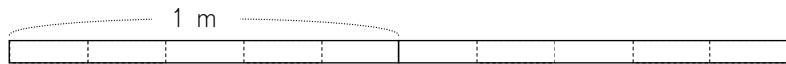

4

テープ図に着色して仮分数や帯分数の理解を深める。

つぎの ながさの ぶんだけ いろを ぬりましょう。
Tsugi no nagasa no bun dake iro o nusimashoo.

① $\frac{7}{5}$ m

② $1\frac{2}{5}$ m

③ $1\frac{4}{5}$ m

④ $\frac{10}{5}$ m

つぎの ながさの ぶんだけ いろを ぬりましょう。

① $\frac{4}{3}$ m

② $1\frac{2}{3}$ m

4

テープ図に着色して仮分数や帯分数の理解を深める。

Color only the following length.

Kulayan lamang ang mga sumusunod na haba.

① $\frac{7}{5}$ m

② $1\frac{2}{5}$ m

③ $1\frac{4}{5}$ m

④ $\frac{10}{5}$ m

Color only the following length.

Kulayan lamang ang mga sumusunod na haba.

① $\frac{4}{3}$ m

② $1\frac{2}{3}$ m

5 ぶんすうの たしざん ①

分数の足し算場面と計算の仕方を知る。

1

How many meters of tape can be made when you combine $1/5$ m of tape and $2/5$ m of tape?

Ilang metrong tape ang magagawa kung ang $1/5$ m na tape at $2/5$ m na tape ay pinagsama?

When $1/5$ and $2/5$ are combined, you will get $3/5$.

Kapag ang $1/5$ ay pinagsama sa $2/5$, ang makukuha ay $3/5$.

This can be written like this in a math formula.

Naisusulat ito katulad nito sa math formula.

$$1 + 2 = 3$$

You only need to add the numbers above.

Pagdaragdag ng mga bilang sa taas lamang ay dapat gawin.

$$\frac{1}{5} + \frac{2}{5} = \frac{3}{5}$$

$$\boxed{\frac{1}{5} + \frac{2}{5} = \frac{3}{5}}$$

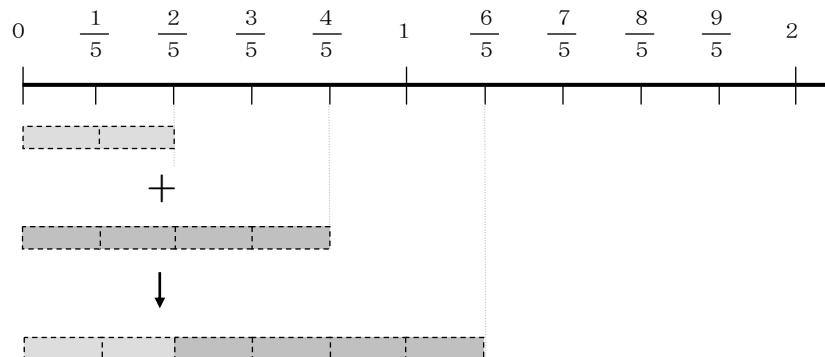

2

分数の足し算の理解を深める①

$\frac{2}{5}$ mのテープと $\frac{4}{5}$ mのテープをあわせると、

なんmのテープになりますか。

$\frac{2}{5}$ と $\frac{4}{5}$ をあわせると、 $\frac{6}{5}$ になります。

これをしきでかくとどうなりますか。

Kore o shiki de kaku to doonarimasuka

4

大きさの等しい分数の特徴に気づく。

What number can be put in the □?

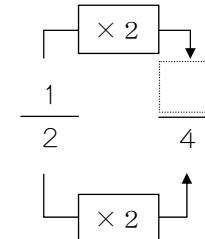

Ano ang bilang na mailalagay sa □?

When the number below (denominator) doubles, the number above (numerator) also doubles.

Kapag ang bilang na nasa ibaba ng fraction (denominator) ay naging doble, ang bilang na nasa itaas (numerator) ay magiging doble din.

When the number below (denominator) becomes three times, the number above (numerator) also becomes three times.

Kapag ang bilang na nasa ibaba ng fraction (denominator) ay naging three times, ang bilang na nasa itaas (numerator) ay magiging three times din.

Look at the diagram in 3 and check the answer.
Tignan ang diagram sa 3 at suriin ang sagot.

$$\textcircled{1} \quad \frac{1}{2} = \frac{\boxed{}}{4}$$

$$\textcircled{2} \quad \frac{1}{2} = \frac{\boxed{}}{6}$$

$$\textcircled{3} \quad \frac{1}{2} = \frac{\boxed{}}{8}$$

$$\textcircled{4} \quad \frac{1}{3} = \frac{\boxed{}}{6}$$

$$\textcircled{5} \quad \frac{1}{3} = \frac{\boxed{}}{9}$$

$$\textcircled{6} \quad \frac{2}{3} = \frac{\boxed{}}{9}$$

$$\textcircled{7} \quad \frac{1}{4} = \frac{\boxed{}}{8}$$

$$\textcircled{8} \quad \frac{2}{4} = \frac{\boxed{}}{8}$$

$$\textcircled{9} \quad \frac{3}{4} = \frac{\boxed{}}{8}$$

$\frac{2}{3}$ ← numerator
 $\frac{3}{3}$ ← denominator

The number above of a fraction is called "BUNSHI", numerator and the number below is called "BUNBO", denominator.
Ang numero na nasa taas ng fraction ay tinatawag na "BUNSHI", numerator at ang numero na nasa baba ay tinatawag na "BUNBO", denominator.

8 わりざんと ぶんすう

1

This is a question of division. How many meters of tape is for one person when a tape with 2m long is distributed for 3 persons with the same length each?
Suliranin ng division ito. Ilang metro ang para sa isang tao kapag ang 2m na tape ay hinati sa tig parehong haba sa tatlong tao?

This can be written like this in a math formula. $2 \div 3 =$
Naisusulat ito katulad nito sa math formula.

When $2 \div 3$ will be calculated with a calculator, the answer is 0.6666666. It cannot be divided.

Kapag ang $2 \div 3$ ay kinalkula sa calculator, ang kalalabasan ay 0.666666. Hindi ito mahahati.

In this situation, the answer can be written with fraction.
Sa ganitong situwasyon, ang sagot ay isinusulat sa fraction.

$$2 \div 3 = \frac{2}{3}$$

$$2 \div 3 = \frac{2}{3}$$

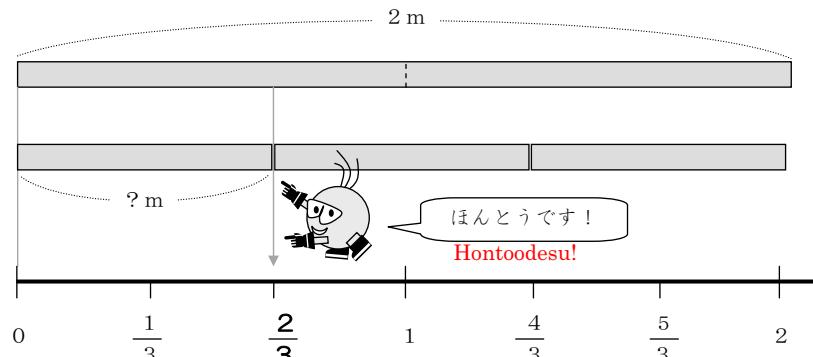

2

整数どうしの割り算の答えが分数で表わされることを確かめる。

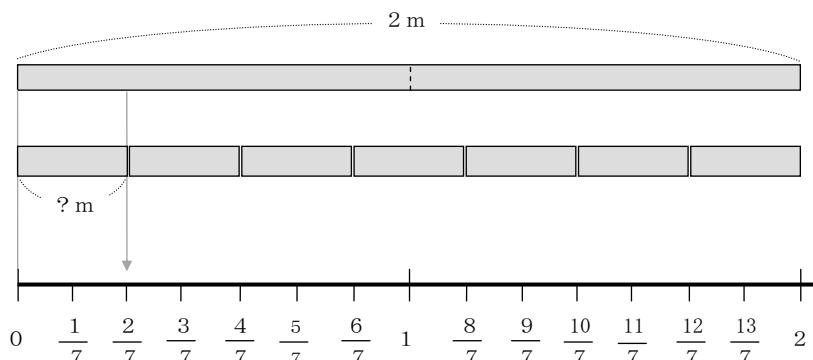

$$2 \div 3 = \frac{2}{3}$$

ほんとうに こたえは $\frac{2}{3}$ でしょうか。
Hontoo ni kotaewa $\frac{2}{3}$ deshooka

ずを つかって たしかめてみましょう。
Zu o tsukatte, tashikamete mimashoo

$2 \div 7$ でも たしかめて みましょう。こたえは $\frac{2}{7}$ でしょうか。
demo tashikamete mimashoo Kotae wa $\frac{2}{7}$ deshooka

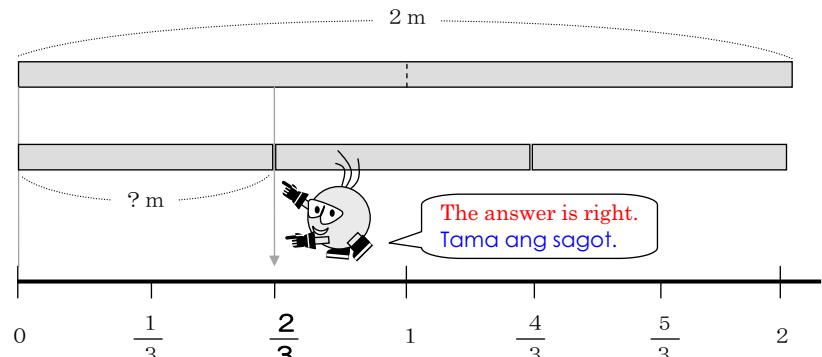

2

整数どうしの割り算の答えが分数で表わされることを確かめる。

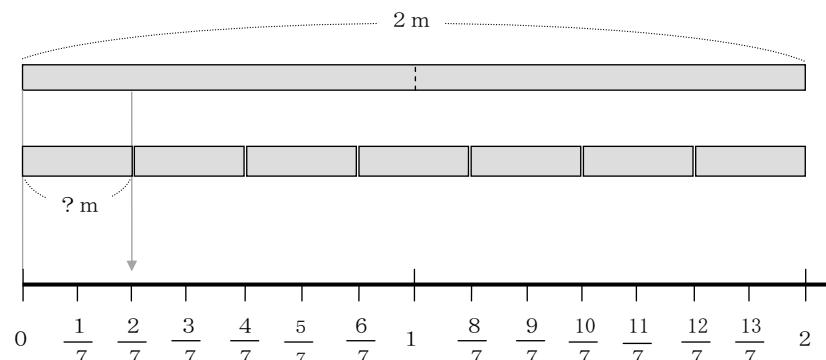

$$2 \div 3 = \frac{2}{3}$$

Is the answer really $2/3$?
Talaga bang ang sagot ay $2/3$?

Use the diagram to check the answer.
Suriin ang sagot sa paggamit ng diagram.

Also check it with $2/7$. Is the answer really $2/7$?
Suriin din sa $2/7$. Talaga bang ang sagot ay $2/7$?

3

割り算の答えを分数で表わすことに慣れる①

□にはいるかずをかきましょう。

$$\textcircled{1} \quad 5 \div 9 = \frac{\square}{9}$$

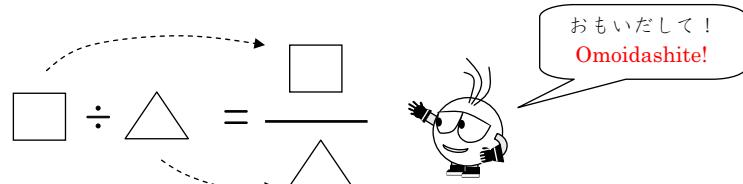

$$\textcircled{2} \quad 1 \div 3 = \frac{1}{\square}$$

$$\textcircled{3} \quad \square \div 9 = \frac{2}{9}$$

$$\textcircled{4} \quad 2 \div \square = \frac{2}{7}$$

$$\textcircled{5} \quad 7 \div 9 = \frac{\square}{9}$$

$$\textcircled{6} \quad \square \div \square = \frac{5}{8}$$

4

割り算の答えを分数で表わすことに慣れる②

わりざんのこたえをぶんすうでこたえましょう。
Warizan no kotaе o bunshu de kotaemashoo

- ① $3 \div 7$
- ② $2 \div 9$
- ③ $5 \div 3$
- ④ $7 \div 3$
- ⑤ $9 \div 2$
- ⑥ $28 \div 6$

3

割り算の答えを分数で表わすことに慣れる①

Write the numbers in the □.

Isulat ang numero na mailalagay sa □.

$$\textcircled{1} \quad 5 \div 9 = \frac{\square}{9}$$

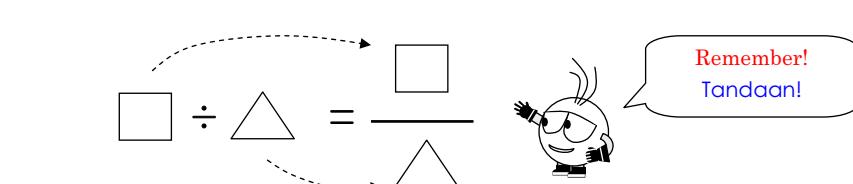

$$\textcircled{2} \quad 1 \div 3 = \frac{1}{\square}$$

$$\textcircled{3} \quad \square \div 9 = \frac{2}{9}$$

$$\textcircled{4} \quad 2 \div \square = \frac{2}{7}$$

$$\textcircled{5} \quad 7 \div 9 = \frac{\square}{9}$$

$$\textcircled{6} \quad \square \div \square = \frac{5}{8}$$

4

割り算の答えを分数で表わすことに慣れる②

Find the answers of division with fractions.
Ilagay ang sagot ng division sa fraction.

- ① $3 \div 7$
- ② $2 \div 9$
- ③ $5 \div 3$
- ④ $7 \div 3$
- ⑤ $9 \div 2$
- ⑥ $28 \div 6$

3

小数を分数で表わす方法を知る～①分母が10

Change 0.3 into fraction.
Ayusin sa fraction ang 0.3.

0.1 is as large as 1/10.
Magkasinlaki ang 0.1 at 1/10.

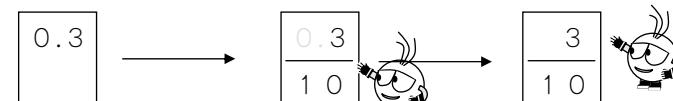

It means that 0.3 has three 0.1, and it also means that it has three 1/10.
Nangangahulugan na ang 0.3 ay may tatlong 0.1 at nangangahulugan ding may tatlong 1/10.

“3 pieces of 1/10” will be 3/10.
Magiging 3/10 ang “tatlong piraso ng 1/10.”

$$0.3 = \frac{3}{10}$$

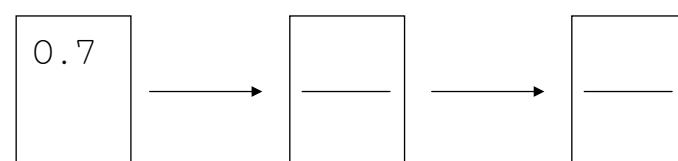

There is an easy way to change.
May madaling paraan ng pag-aayos.

First write 10 below. Next take 0 and . of 0.3 away.
Una isulat ang 10 sa baba. Sunod ay kuhain ang 0 at . ng 0.3.

Change the following decimal into fraction with this method.
Ayusin ang mga sumusunod na decimal sa fraction sa gamit ng parehong paraan.

4

小数を分数で表わす方法を知る～②分母が100

したに 100をかきます。 そして、0.03の 0.0をとります。
 Shita ni o kakimasu Soshite no o torimasu

このやりかたで、つぎの しょうすうを ぶんすうに なおしましょう。

$$\begin{array}{c} ① 0.07 \\ \longrightarrow \\ \frac{0.07}{} \\ \longrightarrow \\ \frac{7}{} \end{array}$$

$$\begin{array}{c} ② 0.23 \\ \longrightarrow \\ \frac{0.23}{} \\ \longrightarrow \\ \frac{23}{} \end{array}$$

$$\begin{array}{c} ③ 0.57 \\ \longrightarrow \\ \frac{57}{} \\ \longrightarrow \\ \frac{57}{} \end{array}$$

0ではないので、.だけをとります。
 dewa nai node dake o torimasu

$$\begin{array}{c} ④ 1.25 \\ \longrightarrow \\ \frac{1.25}{} \\ \longrightarrow \\ \frac{125}{} \end{array}$$

4

小数を分数で表わす方法を知る～②分母が100

0.03 can be also changed into fraction with the same method.
 Ang 0.03 ay maaayos din sa fraction sa gamit ng parehong paraan.

$$\begin{array}{c} 0.03 \\ \longrightarrow \\ \frac{0.03}{100} \\ \longrightarrow \\ \frac{3}{100} \end{array}$$

Write 100 below. Then take 0.0 of 0.03 away.
 Isulat ang 100 sa baba. Pagkatapos kunin ang 0.0 ng 0.03.

Change the following decimal into fraction with this method.

Ayusin ang mga sumusunod na decimal sa fraction sa gamit ng parehong paraan.

$$\begin{array}{c} ① 0.07 \\ \longrightarrow \\ \frac{0.07}{} \\ \longrightarrow \\ \frac{7}{} \end{array}$$

$$\begin{array}{c} ② 0.23 \\ \longrightarrow \\ \frac{0.23}{} \\ \longrightarrow \\ \frac{23}{} \end{array}$$

$$\begin{array}{c} ③ 0.57 \\ \longrightarrow \\ \frac{57}{} \\ \longrightarrow \\ \frac{57}{} \end{array}$$

It is not 0, so take only . away.
 Hindi ito 0 kaya kuhain lamang ang "!".

$$\begin{array}{c} ④ 1.25 \\ \longrightarrow \\ \frac{1.25}{} \\ \longrightarrow \\ \frac{125}{} \end{array}$$

5

整数を分数で表わす方法を知る。

□にはいるかずはいくつですか。
ni hairu kazu wa ikutsu desuka

$$4 \div 1 = 4$$

$$4 \div 1 = \frac{\square}{\square}$$

4 ÷ 1 のこたえは 4 ですから、4 と $\frac{4}{1}$ は おなじです。
no kotaе wa desukara to 1 wa onaji desu

つぎの□にはいるかずはいくつですか。
Tsugi no ni hairu kazu wa ikutsudesuka

$$\textcircled{1} \quad 5 \div 1 = \frac{\square}{1} \Leftrightarrow \frac{\square}{1} = 5$$

$$\textcircled{2} \quad 6 \div 1 = \frac{\square}{\square} \Leftrightarrow \frac{\square}{\square} = \square$$

$$\textcircled{3} \quad 9 \div 1 = \frac{\square}{\square} \Leftrightarrow \frac{\square}{\square} = \square$$

5

整数を分数で表わす方法を知る。

What number can be put in the □?

Anong numero ang mailalagay sa □?

$$4 \div 1 = 4$$

$$4 \div 1 = \frac{\square}{\square}$$

The answer to $4 \div 1$ is 4, so 4 and $4/1$ are the same.
Ang sagot sa $4 \div 1$ ay 4 kaya ang 4 at $4/1$ ay magkakapareho.

What number can be put in the □?

Anong numero ang mailalagay sa □?

$$\textcircled{1} \quad 5 \div 1 = \frac{\square}{1} \Leftrightarrow \frac{\square}{1} = 5$$

$$\textcircled{2} \quad 6 \div 1 = \frac{\square}{\square} \Leftrightarrow \frac{\square}{\square} = \square$$

$$\textcircled{3} \quad 9 \div 1 = \frac{\square}{\square} \Leftrightarrow \frac{\square}{\square} = \square$$

11 ぶんすうの たしざん ②ちがう ぶんぽ

分母が異なる分数の足し算場面を知る。

1

How many meters of tape can be made when you combine $1/2$ m of tape and $1/3$ m of tape?

Kapag ang $1/2$ m na tape at $1/3$ m na tape ay pinagsama, ilang m na tape ang magagawa?

They cannot be
calculated as they are
because they have
different denominators
(below).

Hindi makakalkula sa
ganito lamang ang
mga ito dahil hindi
magkakapareho ang
mga denominator
(baba) ng mga ito.

Change the denominator into 6.
Gawing 6 ang denominator.

1/2 is as large as 3/6.
Ang 1/2 ay kasinlaki ng
3/6.
1/3 is as large as 2/6.
Ang 1/3 ay kasinlaki ng
2/6.

When you combine $1/2$ m and $1/3$ m, it will be the same length as $5/6$ m.
Kapag ang $1/2$ m at $1/3$ m ay pinagsama, magiging kasinghaba ng $5/6$ m.

こたえです。
kotaedesu

When the denominators (below) are different, change them into common to calculate.

Kapag ang mga denominator (baba) ay magkakaiba, gawing magkakapareho ang mga ito at kalkulahin.

★ Learn how to change the denominators to common.

Mututuhan ang gawing magkakapareho ang mga denominator.

① Line up two fractions.
Paghanayin ang dalawang fraction.

② Make the denominator twice, 3 times, 4 times.
Gawing 2 beses, 3 beses, 4 na beses ang denominator.

③ Also make the numerator twice, 3 times 4 times.
Gawin ding 2 beses, 3 beses, 4 na beses ang numerator.

$$\frac{1}{2} = \frac{2}{4} \quad \frac{3}{6} \quad \frac{4}{8}$$

Which fractions have common denominators?
Alin ang mga fraction na may parehong denominator?

$$\frac{1}{3} = \frac{2}{6} \quad \frac{3}{9} \quad \frac{3}{12}$$

④ Find fractions which have common denominators.
Hanapin ang fraction na may mga parehong denominator.

⑤ Calculate $3/6+2/6$.
Kalkulahin ang $3/6+2/6$.

$$\frac{3}{6} + \frac{2}{6} = \frac{5}{6}$$

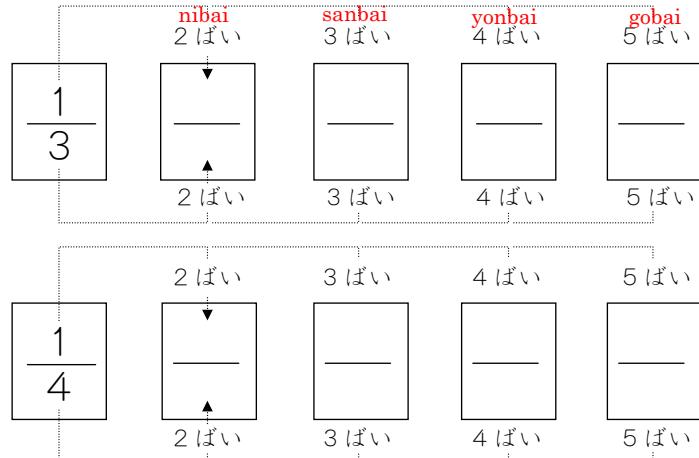

This is the answer.
Ito ang sagot.

3

大きさの等しい分数の作りながら計算をしてみる。

$$\frac{1}{3} + \frac{1}{4}$$
 の けいさんを しましょう。
 no keesan o shimashoo

①ふたつの ぶんすうを ならべます。

②それぞれの ぶんぽを 2ばい、 3ばいに していきます。

Sorezore no bunbo o nibai sanbai ni shite ikimasu

③ぶんしも 2ばい、 3ばいに していきます。

Bunshi mo nibai sanbai ni shiteikimasu

④おなじ ぶんぽの ぶんすうを みつけます。

Onaji bunbo no bunsuu o mitsukemasu

⑤その ぶんすうを つかって けいさんを します。

Sono bunsuu o tsukatte keesan o shimasu

$$\frac{1}{3} + \frac{1}{4} = \frac{4}{12} + \frac{3}{12}$$

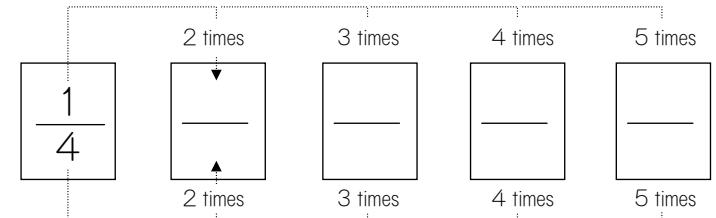

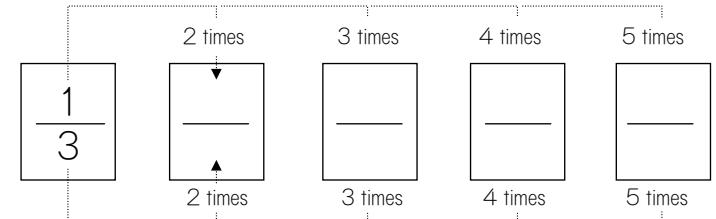

$$\frac{4}{12} + \frac{3}{12} = \frac{7}{12}$$

3

大きさの等しい分数の作りながら計算をしてみる。

Calculate $1/3+1/4$.Kalkulahin ang $1/3+1/4$.

- ① Line up two fractions.
Paghanayin ang dalawang fraction.

- ② Make the denominator twice, 3 times, 4 times.
② Gawing 2 beses, 3 beses, 4 na beses ang denominator.

- ③ Also make the numerator twice, 3 times 4 times.
③ Gawin ding 2 beses, 3 beses, 4 na beses ang numerator.

- ④ Find fractions which have common denominators.
④ Hanapin ang fraction na may mga parehong denominator.

- ⑤ Calculate by using those fractions.
⑤ Kalkulahin sa gamit ng mga fraction na iyon.

$$\frac{1}{3} + \frac{1}{4} = \frac{4}{12} + \frac{3}{12}$$

This is the answer.
Ito ang sagot.

$$\frac{4}{12} + \frac{3}{12} = \frac{7}{12}$$

4

異分母分数の足し算に慣れる。

$$\frac{2}{3} + \frac{3}{4}$$

の けいさんを しましょう。

①おなじ ぶんぽの ぶんすうを みつけましょ。

Onaji bunbo no bunsuu o mitsukemashoo

2 ぱい	3 ぱい	4 ぱい	5 ぱい
$\frac{2}{3}$	<input type="text"/>	<input type="text"/>	<input type="text"/>
2 ぱい	3 ぱい	4 ぱい	5 ぱい
2 ぱい	3 ぱい	4 ぱい	5 ぱい
$\frac{3}{4}$	<input type="text"/>	<input type="text"/>	<input type="text"/>
2 ぱい	3 ぱい	4 ぱい	5 ぱい

②おなじ ぶんぽの ぶんすうで けいさんしましょう。

Onaji bunbo no bunsuu de keesan shimashoo

$$\frac{2}{3} + \frac{3}{4} = \underline{\quad} + \underline{\quad}$$

ぶんぽを おなじに することを 「つうぶんする」と いいます。

Bunbo o onaji ni surukoto o "tsuubun suru" to iimasu

つうぶんして、 $\frac{1}{3} + \frac{3}{5}$ の けいさんを しましょう。

Tsuubun shite $\frac{1}{3} + \frac{3}{5}$ no keesan o shimashoo

4

異分母分数の足し算に慣れる。

Calculate $2/3+3/4$.Kalkulahin ang $2/3+3/4$.

① Find fractions which have common denominators.

① Hanapin ang fraction na may mga parehong denominator.

$\frac{2}{3}$	2 times	3 times	4 times	5 times
<input type="text"/>				
2 times	3 times	4 times	5 times	
$\frac{3}{4}$	2 times	3 times	4 times	5 times
<input type="text"/>				
2 times	3 times	4 times	5 times	

② Calculate by using those fractions.

② Kalkulahin sa gamit ng mga fraction na iyon.

$$\frac{2}{3} + \frac{3}{4} = \underline{\quad} + \underline{\quad}$$

To change the denominators to common is called "to reduce to common denominators".

Ang pagpapapareho ng mga denominator ay tinatawag na "mag-reduce sa magkakaparehong denominator".

Calculate $1/3+3/5$ by reducing to a common denominator.

Kalkulahin ang $1/3+3/5$ sa pag-rereduce sa magkakaparehong denominator.

おぼえていますか。
Oboeteimasuka

1は ぶんすうに なおすと、
Ichi wa bunssuu ni naosu to

$$\frac{1}{1} \frac{2}{2} \frac{3}{3} \frac{4}{4} \cdots \frac{7}{7} \frac{8}{8} \frac{9}{9}$$

となります。

to narimasu

このなかから おなじ ぶんの $\frac{9}{9}$ を つかいます。
Kononaka kara onaji bunbo no $\frac{9}{9}$ o tsukaimasu

3

分母が異なる「帯分数」の足し算と引き算の計算をする。

Calculate the followings.
Kalkulahin ang mga sumusunod.

$$\textcircled{1} \quad \frac{3}{4} + \frac{2}{3} = \quad \textcircled{2} \quad \frac{3}{4} - \frac{1}{3} =$$

$$\textcircled{3} \quad \frac{1}{4} + \frac{2}{5} = \quad \textcircled{4} \quad \frac{2}{5} - \frac{1}{4} =$$

$$\textcircled{5} \quad \frac{3}{5} + \frac{2}{7} = \quad \textcircled{6} \quad 1\frac{2}{9} - \frac{6}{7} =$$

Convert the mixed fraction into an improper fraction to calculate.

Ayusin ang mixed fraction sa improper fraction at kalkulahin.

$$1\frac{2}{9} = \frac{9}{9} + \frac{2}{9} = \frac{11}{9}$$

Those with 1 or 2 in front of them are called mixed fraction. Do you remember?

Ang mga fraction na may 1 o 2 sa harap nito ay tinatawag na mixed fraction. Natatandaan mo ba?

If 1 is changed into fraction, it becomes ...

Kapag inayos ang 1 sa fraction, magiging ...

$$\frac{1}{1} \frac{2}{2} \frac{3}{3} \frac{4}{4} \cdots \frac{7}{7} \frac{8}{8} \frac{9}{9}$$

Among these, $9/9$ which has the common denominator can be used.
Sa mga fractiong ito, magagamit ang $9/9$ na may magkakaparehong denominator.

Kulayan ang diagram sa baba.

I can almost understand the idea of $1/3$, but it is hard to understand the idea of $6/18$.
Naiintindihan ng halos ang $1/3$, ngunit ang $6/18$ ay hindi naiintindihan ng lubusan.

These two fractions have the same sizes.

Magkasinlaki ang dalawang fractiong ito.

The denominator is big.

Ang denominator ay malaki.

It cannot be known at once how large that fraction is.

Hindi kaagad malalaman kung gaano kalaki ang fractiong iyon.

So the denominator should be as small as possible.

Kaya ang denominator ay kailangang maliit hanggaat maaari.

It can be smaller in this way.

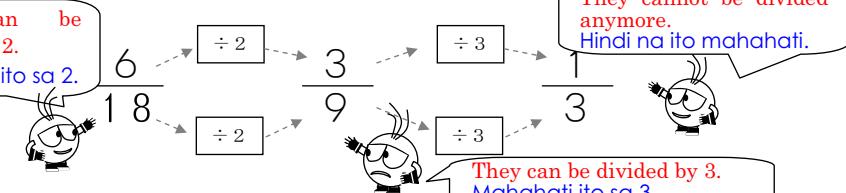

Maaaring palitin ito sa ganitong paraan.

Divide both denominator and numerator by 2, 3 and 5 etc.

Hatiin ang denominator at numerator sa 2,3 o 5 at iba pa.

They can be divided by 2.
Mahahati ito sa 2.

They cannot be divided anymore.
Hindi na ito mahahati.

2

素数(2, 3, 5)で割って約分する。

To make denominator and nominator smaller by dividing them by the same number is called "to reduce (to the lowest terms)".

Ang paghahati ng denominator at numerator sa parehong bilang upang palitiin ang fraction ay tinatawag na "mag-reduce" (sa pinakamaliit).

$$\textcircled{1} \quad \frac{4}{10} \xrightarrow{\div 2} \frac{2}{5}$$

Reduce a fraction.
Mag-reduce.

$$\textcircled{2} \quad \frac{12}{15} \xrightarrow{\div 3} \frac{4}{5}$$

They cannot be divided
by 2. In this situation,
divide by 3.

o ue ni agete keesan shimasu

$$\frac{4 \times 2}{5} = \frac{8}{5}$$

こたえは $\frac{8}{5}\text{ m}^2$ です。
Kotae wa $\frac{8}{5}\text{ m}^2$ desu

14 ぶんすうのかけざん ①

分数の掛け算場面 (分数×整数) を知る。

1

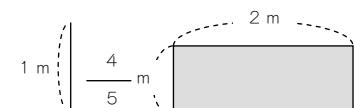

The area of a rectangle is calculated by "the vertical line (length) × the horizontal line (width)". For example, the area of a rectangle, 2m long and 3m wide can be calculated with $2 \times 3=6$, so it is 6 m^2 .

Ang kasakupan ng rectangle ay makakalkula sa "patayong linya (haba) × pahalang na linya (lapad)". Halimbawa, ang kasakupan ng may haba na 2m at may lapad na 3m na rectangle ay $2 \times 3=6$, kaya 6 m^2 ito.

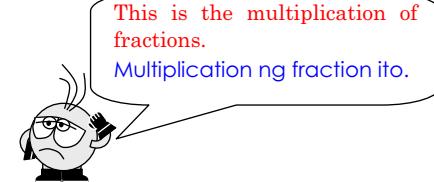

Then how many m^2 is the area of a rectangle, $4/5\text{m}$ long and 2m wide?

Ilang m^2 ang kasakupan ng rectangle na may haba na $4/5\text{m}$ at may lapad na 2m ?

$$(\text{length}/\text{haba}) \times (\text{width}/\text{lapad}) =$$

$$\frac{4}{5} \times 2 =$$

$$\frac{4 \times 2}{5}$$

Calculate by bringing 2 up.
Itaas ang 2 sa pagkalkula.

$$\frac{4 \times 2}{5} = \frac{8}{5}$$

The answer is $8/5\text{ m}^2$.
Ang sagot ay $8/5\text{ m}^2$.

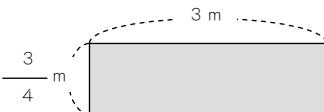

2

分数の掛け算（分数×整数）を計算してみる。

15 ぶんすうのわりざん ①

分数の割り算場面（分数÷整数）を知る。

1

There is a $\frac{3}{5} \text{ m}^2$ rectangle. How many m^2 is the area when you divide this rectangle into 2 equal parts (one half)?

Mayroong $\frac{3}{5} \text{ m}^2$ na rectangle. Ilang m^2 ang kasakupan kapag hinati ang rectangle na ito sa dalawang magkakatumbas na bahagi (kalahati)?

$$\frac{3}{5} \text{ m}^2 \div 2 = ? \text{ m}^2$$

This is the division of fractions.
Division ng fraction ito.

[how to calculate]

[paraan upang kalkulahin]

Bring 2 down. Then calculate by changing the \div (division) into \times (multiplication).

Ibaba ang 2. Palitan ang \div (division) ng \times (multiplication) at kalkulahin.

$$\frac{3}{5} \div 2 =$$

$$\frac{3}{5 \times 2}$$

$$\frac{3}{5 \times 2} = \frac{3}{10}$$

The answer is $\frac{3}{10} \text{ m}^2$.
Ang sagot ay $\frac{3}{10} \text{ m}^2$.

16 ぶんすうのかけざん ②

Bunsuu no kakezan

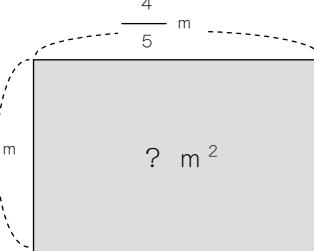

分数の掛け算場面（分数×分数）を知る。

1

たて $\frac{2}{3}$ m、よこ $\frac{4}{5}$ m の ちょうほうけいの めんせきは、
 Tate meetoru yoko no choohookeee no menseki wa
 なん m^2 になりますか。
 nan heehoomeetoru ni narimasu ka

$$(たて) \times (よこ) = (\text{めんせき}) \quad \text{Tate kakeru Yoko menseki} \quad \frac{2}{3} \text{ m}$$

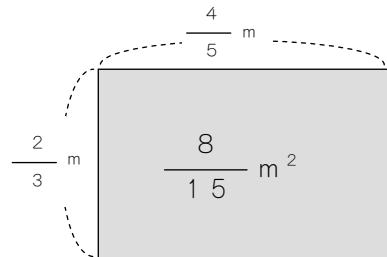

$$\frac{2}{3} \times \frac{4}{5} =$$

(ぶんすう) × (ぶんすう) の ときは こうします。
 Bunsuu kakeru bunsuu no toki wa koo shimasu

$$\frac{2}{3} \times \frac{4}{5} = \frac{2}{3} \times \frac{4}{5} \rightarrow [2 \times 4 = 8] \rightarrow \frac{8}{15} \rightarrow [3 \times 5 = 15]$$

$$= \frac{8}{15}$$

$$(\text{こたえ}) \quad \text{kotae} \quad \frac{8}{15} \text{ m}^2$$

16 ぶんすうのかけざん ②

分数の掛け算場面（分数×分数）を知る。

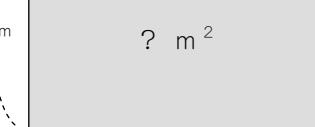

1

How many m^2 is the area of a rectangle, $2/3$ m long and $4/5$ m wide?

Ilang m^2 ang kasakupan ng rectangle na may haba na $2/3$ m at may lapad na $4/5$ m?

$$(\text{length/haba}) \times (\text{width/lapad}) = (\text{area/kasakupan}) \quad \frac{4}{5} \text{ m}$$

$$\frac{2}{3} \times \frac{4}{5} =$$

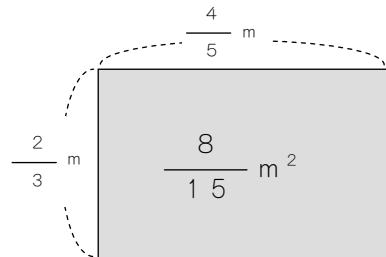

Do like this when calculating (fraction) × (fraction).

Makakalkula ang (fraction) × (fraction) sa ganitong paraan.

$$\frac{2}{3} \times \frac{4}{5} = \frac{2}{3} \times \frac{4}{5} \rightarrow [2 \times 4 = 8] \rightarrow \frac{8}{15} \rightarrow [3 \times 5 = 15]$$

$$= \frac{8}{15}$$

$$(\text{Answer}) \quad \frac{8}{15} \text{ m}^2$$

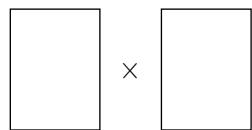

2

分数×分数の計算をしてみる。

たて $\frac{3}{4}$ m、よこ $\frac{7}{8}$ m の ちょうほうけいの no choohookee no hirosa wa

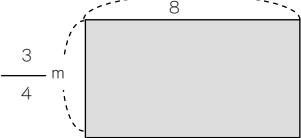

なん m^2 ですか。
nan desu ka

(しき)

$$\textcircled{1} \quad \frac{2}{5} \times \frac{2}{7} = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$\textcircled{2} \quad \frac{5}{6} \times \frac{7}{3} = \underline{\hspace{1cm}}$$

$$\textcircled{3} \quad \frac{4}{9} \times \frac{5}{3} = \underline{\hspace{1cm}}$$

2

分数×分数の計算をしてみる。

How many m^2 is the area of a rectangle, $3/4$ m long and $7/8$ m wide?Ilang m^2 ang kasakupan ng rectangle na may haba na $3/4$ m at may lapad na $7/8$ m?

(Formula) × = $\frac{7}{8} m$

$$\frac{\underline{\hspace{1cm}} \times \underline{\hspace{1cm}}}{\underline{\hspace{1cm}} \times \underline{\hspace{1cm}}} = \frac{\underline{\hspace{1cm}}}{\underline{\hspace{1cm}}}$$

(Answer)

Calculate the following multiplication.

Kalkulahin ang mga sumusunod na multiplication.

$$\textcircled{1} \quad \frac{2}{5} \times \frac{2}{7} = \underline{\hspace{1cm}} \times \underline{\hspace{1cm}}$$

$$\textcircled{2} \quad \frac{5}{6} \times \frac{7}{3} = \underline{\hspace{1cm}}$$

$$\textcircled{3} \quad \frac{4}{9} \times \frac{5}{3} = \underline{\hspace{1cm}}$$

3

約分してから計算する方法を知る（約分できる数が1組）。

$$\frac{6}{7} \times \frac{1}{4}$$

の けいさんを しましょう。
no keesan o shimashoo

6と4で やくぶんできます。
to de yakubun dekimasu

$$\frac{6}{7} \times \frac{1}{4} = \frac{\cancel{6} \times 1}{7 \times \cancel{4}}$$

$$= \frac{\boxed{3}}{7 \times \cancel{4}} \times 1$$

$\cancel{6} \div 2 = 3$
 $4 \div 2 = 2$

$$= \frac{3}{1 \ 4}$$

6も4も2でわれますね。
mo mo de waremasu ne

$$6 \div 2 = 3$$

$$4 \div 2 = 2$$

つぎの かけざんを しましょう。

$$\textcircled{1} \quad \frac{2}{5} \times \frac{3}{4} = \frac{\quad \times}{\quad \times}$$

$$\textcircled{2} \quad \frac{5}{6} \times \frac{3}{7} = \underline{\hspace{2cm}}$$

$$\textcircled{3} \quad \frac{4}{9} \times \frac{3}{5} = \underline{\hspace{2cm}}$$

3

約分してから計算する方法を知る（約分できる数が1組）。

Calculate $6/7 \times 1/4$.

Kalkulahin ang $6/7 \times 1/4$.

6 and 4 can be reduced.
Ang 6 at 4 ay maaaring i-reduce.

$$\frac{6}{7} \times \frac{1}{4} = \frac{\cancel{6} \times 1}{7 \times \cancel{4}}$$

$$= \frac{\boxed{3}}{7 \times \cancel{4}} \times 1$$

$\cancel{6} \div 2 = 3$
 $4 \div 2 = 2$

$$= \frac{3}{1 \ 4}$$

Calculate the following multiplication.

Kalkulahin ang mga sumusunod na multiplication.

$$\textcircled{1} \quad \frac{2}{5} \times \frac{3}{4} = \frac{\quad \times}{\quad \times}$$

$$\textcircled{2} \quad \frac{5}{6} \times \frac{3}{7} = \underline{\hspace{2cm}}$$

$$\textcircled{3} \quad \frac{4}{9} \times \frac{3}{5} = \underline{\hspace{2cm}}$$

4

約分してから計算する方法に慣れる（約分できる数が2組）。

とちゅうで やくぶんして けいさんしましょう。
Tochuu de yakubun shite keesan shimashoo

$$\frac{8}{9} \times \frac{3}{10} = \frac{\cancel{8} \times 3}{\cancel{9} \times \cancel{10}}$$

8と10、3と9で
to to de
やくぶんできます。
yakubun dekimasu

$$\begin{array}{r} 8 \div 2 = 4 \\ 10 \div 2 = 5 \end{array} \quad \begin{array}{r} 3 \div 3 = 1 \\ 9 \div 3 = 3 \end{array}$$

$$= \frac{4 \times 1}{8 \times 3} = \frac{9 \times 10}{3 \times 5} = \frac{1}{1}$$

$$= \frac{4}{15}$$

つぎのかけざんを しましょう。

$$\textcircled{1} \quad \frac{4}{9} \times \frac{3}{2} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$\textcircled{2} \quad \frac{3}{7} \times \frac{14}{15} = \underline{\hspace{2cm}}$$

4

約分してから

Calculate by reducing along the way.

$$\frac{8}{9} \times \frac{3}{10} = \frac{\cancel{8} \times 3}{9 \times \cancel{10}}$$

Ang 8 at 10, 3 at 9 ay maaaring i-reduce.

$$\begin{array}{r} 8 \div 2 = 4 \\ 10 \div 2 = 5 \end{array} \quad \begin{array}{r} 3 \div 3 = 1 \\ 9 \div 3 = 3 \end{array}$$

$$= \frac{4 \times 3}{9 \times 10} = \frac{1}{3}$$

$$= \frac{4}{15}$$

Calculate the following multiplication.

Kalkulahin ang mga sumusunod na multiplication.

$$\textcircled{1} \quad \frac{4}{9} \times \frac{3}{2} = \underline{\hspace{2cm}} \times \underline{\hspace{2cm}}$$

$$\textcircled{2} \quad \frac{3}{7} \times \frac{14}{15} = \underline{\hspace{2cm}}$$

iinodesune

$$(\こたえ) \quad \frac{6}{5} m^2$$

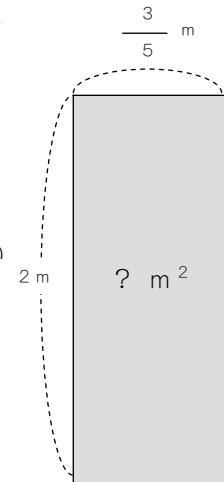

17 ぶんすうのかけざん ③

分数の掛け算場面（整数×分数）を知る。

1

How many m^2 is the area of a rectangle, 2m long and $3/5$ m wide?

Ilan m^2 ang kasakupan ng rectangle na may haba na 2m at may lapad na $3/5$ m?

$$(\text{length/haba}) \times (\text{width/lapad}) = (\text{area/kasakupan})$$

$$2 \times \frac{3}{5} =$$

Do like this when calculating (integer) × (fraction).

Makakalkula ang (integer) × (fraction) sa ganitong paraan.

$$\downarrow$$

$$1, 2, 3, 4, 5 \dots$$

Bring this 2 up.
Itaas ang 2 na ito.

$$2 \times \frac{3}{5} = \frac{2 \times 3}{5} \rightarrow \boxed{2 \times 3 = 6} \rightarrow \frac{6}{5}$$

The integer should be brought up.
Kailangang itaas ang integer.

$$(\text{Answer}) \quad \frac{6}{5} m^2$$

2

整数×分数の計算をしてみる。

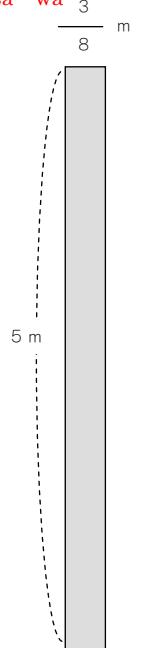

たて 5m、よこ $\frac{3}{8}$ m の ちょうほうけいの ひろさは
 Tate yoko no choohookeee no hirosa wa $\frac{3}{8}$ m

なん m^2 ですか。
 nan desu ka

(しき)
 shiki $\boxed{}$ \times $\boxed{}$ =

$$\frac{\boxed{} \times \boxed{}}{\boxed{}} = \frac{\boxed{}}{\boxed{}}$$

(こたえ)
 kotaе

つぎのかけざんをしましょう。
 Tsugi no kakezan o shimashoo

① $5 \times \frac{2}{7} = \underline{\hspace{2cm}} \times$

② $7 \times \frac{3}{5} = \underline{\hspace{2cm}}$

③ $8 \times \frac{7}{3} = \underline{\hspace{2cm}}$

2

整数×分数の計算をしてみる。

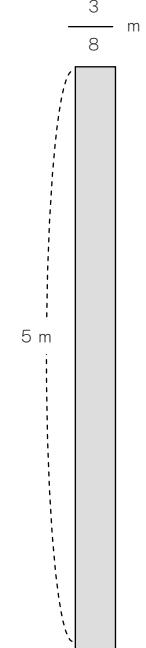

How many m^2 is the area of a rectangle, 5m long and $3/8$ m wide?

Ilan m^2 ang kasakupan ng rectangle na may haba na 5m at may lapad na $3/8$ m?

(Formula) $\boxed{}$ \times $\boxed{}$ =

$$\frac{\boxed{} \times \boxed{}}{\boxed{}} = \frac{\boxed{}}{\boxed{}}$$

(Answer)

Calculate the following multiplication.

Kalkulahin ang mga sumusunod na multiplication.

① $5 \times \frac{2}{7} = \underline{\hspace{2cm}} \times$

② $7 \times \frac{3}{5} = \underline{\hspace{2cm}}$

③ $8 \times \frac{7}{3} = \underline{\hspace{2cm}}$

3

(整数) × (分数) でも約分してから計算する方法が使えることを知る。

$3 \times \frac{7}{6}$ の けいさんを しましょう。
no keesan o shimashoo

$$3 \times \frac{7}{6} = \frac{\cancel{(3)} \times 7}{\cancel{6}}$$

$$= \frac{\boxed{1} \times 7}{\cancel{6}} \quad \boxed{2}$$

3 も 6 も 3 でわれますね。
mo mo de waremasu ne
 $3 \div 3 = 1$
 $6 \div 3 = 2$

$$= \frac{7}{2}$$

つぎの かけざんを しましょう。

$$\textcircled{1} \quad 8 \times \frac{3}{4} = \underline{\hspace{2cm}} \times$$

$$\textcircled{2} \quad 14 \times \frac{3}{7} = \underline{\hspace{2cm}}$$

$$\textcircled{3} \quad 25 \times \frac{3}{5} = \underline{\hspace{2cm}}$$

3

(整数) × (分数) でも約分してから計算する方法が使えることを知る。

Calculate $3 \times 7/6$.Kalkulahin ang $3 \times 7/6$.

$$3 \times \frac{7}{6} = \frac{\cancel{(3)} \times 7}{\cancel{6}}$$

$$= \frac{\boxed{1} \times 7}{\cancel{6}} \quad \boxed{2}$$

3 and 6 can be reduced by 3.
Ang 3 at 6 ay mahahati sa 3.
 $3 \div 3 = 1$
 $6 \div 3 = 2$

$$= \frac{7}{2}$$

Calculate the following multiplication.

Kalkulahin ang mga sumusunod na multiplication.

$$\textcircled{1} \quad 8 \times \frac{3}{4} = \underline{\hspace{2cm}} \times$$

$$\textcircled{2} \quad 14 \times \frac{3}{7} = \underline{\hspace{2cm}}$$

$$\textcircled{3} \quad 25 \times \frac{3}{5} = \underline{\hspace{2cm}}$$

18 ぶんすうのわりざん ②

Bunsuu no warizan

(長方形の面積) ÷ (一边) で他の一边の長さが求められることを知る。

1

たてが 2m、めんせきが 6 m^2 の ちょうほうけいがあります。

Tate ga menseki ga no choohookee ga arimasu

よこは なんmですか。

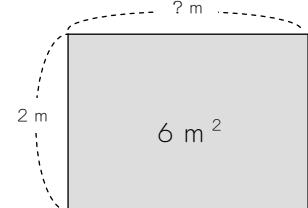

Yoko wa nan desuka

(たて) × (よこ) = (めんせき)

Tate kakeru yoko menseki

$$2 \times \boxed{\quad} = 6$$

$$\boxed{\quad} = 6 \div 2$$

だから、よこのながさは 3mです。

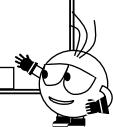

Dakara yoko no nagasa wa desu

(たて) × (よこ) = (めんせき) の しきは
no shiki wa

(めんせき) ÷ (たて) = (よこ) と

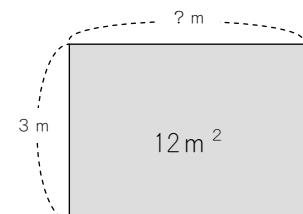

Menseki waru tate yoko to

かきかえることが できます。
kakikaeru koto ga dekimasu

これを つかって よこのながさを けいさんしましょう。

Kore o tsukatte yoko no nagasa o keesan shimashoo

18 ぶんすうのわりざん ②

(長方形の面積) ÷ (一边) で他の一边の長さが求められることを知る。

1

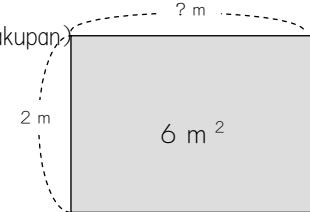

There is a rectangle whose length is 2m and area is 6 m^2 . How many meters is the width?

Mayroong rectangle na may haba ng 2m at may kasakupan na 6 m^2 . Ilang m ang lapad nito?

(length/haba) × (width/lapad) = (area/kasakupan)

$$2 \times \boxed{\quad} = 6$$

$$\boxed{\quad} = 6 \div 2$$

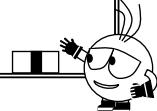

So the width is 3m.

Kaya ang lapad nito ay 3m.

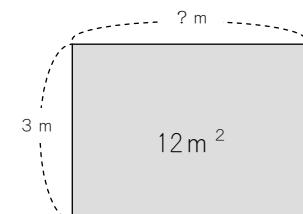

The math formula $(\text{length}) \times (\text{width}) = (\text{area})$ can be changed into $(\text{area}) \div (\text{length}) = (\text{width})$.

Ang math formula na $(\text{haba}) \times (\text{lapad}) = (\text{laki / kasakupan})$ ay maaaring palitan ng $(\text{laki / kasakupan}) \div (\text{haba}) = (\text{lapad})$.

Use this to calculate the width.

Kalkulahin ang lapad sa gamit nito.

2

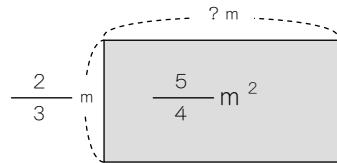

(分数) ÷ (分数) の場面を知る。

めんせきが $\frac{5}{4}$ m²、たてが $\frac{2}{3}$ mの ちょうほうけいが
Menseki ga $\frac{5}{4}$ m² tate ga $\frac{2}{3}$ m no choohookeee ga

あります。よこは なんmですか。
arimasu Yoko wa nan desuka

$$\text{(menseki)} \div \text{(tate)} = \text{(yoko)}$$

$$\frac{5}{4} \div \frac{2}{3} =$$

(ぶんすう) ÷ (ぶんすう) の けいさんですね。
Bunsuu waru bunsuu no keesan desune

(ぶんすう) ÷ (ぶんすう) の けいさんは こうします。
Bunsuu waru bunsuu no keesan wa kooshimasu

$$\frac{5}{4} \div \frac{2}{3} = \frac{5 \times 3}{4 \times 2}$$

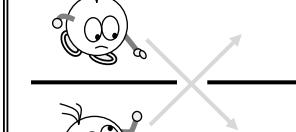

① ÷ → × ② $\frac{2}{3} \rightarrow \frac{3}{2}$

$$\frac{5 \times 3}{4 \times 2} = \frac{15}{8}$$

(こたえ) $\frac{15}{8}$ m²
Kotae

ぶんすうで わるとときは、
Bunsuu de warutoki wa

かけあがって、かけおりて。
kakeagatte kakeorite

2

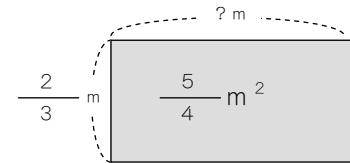

(分数) ÷ (分数) の場面を知る。

There is a rectangle whose length is $2/3$ m and area is $5/4$ m². How many meters is the width?

Mayroong rectangle na may haba ng $2/3$ m at may kasakupan na $5/4$ m². Ilang m ang lapad nito?

$$\text{(area)} \div \text{(length)} = \text{(width)}$$

$$\frac{5}{4} \div \frac{2}{3} =$$

This is the calculation of (fraction)÷(fraction).
Ito ay ang pag-kalkula ng (fraction)÷(fraction).

This is how to calculate (fraction)÷(fraction).

Makakalkula ang (fraction)÷(fraction) sa ganitong paraan.

$$\frac{5}{4} \div \frac{2}{3} = \frac{5 \times 3}{4 \times 2}$$

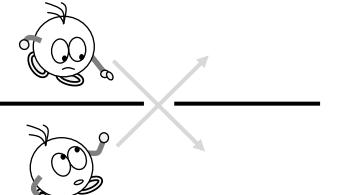

① ÷ → × ② $\frac{2}{3} \rightarrow \frac{3}{2}$

In calculation of division by fraction,
turn the second fraction upside down
(reciprocal) and multiply.

Sa kalkulasyon ng division ng fraction, kailangang baliktarin ang pangalawang fraction at kalkulahin ang multiplication.

$$\frac{5 \times 3}{4 \times 2} = \frac{15}{8}$$

(Answer) $\frac{15}{8}$ m²

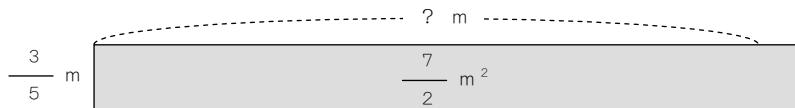

3

分数÷分数の計算をしてみる。

めんせきが $\frac{7}{2}$ m²、たてが $\frac{3}{5}$ mの ちょうほうけいの
 Menseki ga $\frac{7}{2}$ m² tate ga $\frac{3}{5}$ m no choohookeee no

よこは なんmですか。
 yoko wa nan desuka

[しき] (めんせき) ÷ (たて) =
 shiki menseki waru tate

$$\frac{\boxed{}}{\boxed{}} \div \frac{\boxed{}}{\boxed{}} = \frac{\boxed{} \times \boxed{}}{\boxed{} \times \boxed{}}$$

$$= \frac{\boxed{}}{\boxed{}}$$

(こたえ) よこ m
 kotaе yoko

つぎのわりざんをしましょう。
 Tsugi no warizan o shimashoo

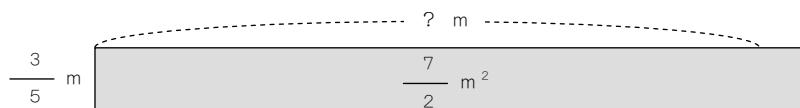

$$\frac{3}{8} \div \frac{5}{7}$$

3

分数÷分数の計算をしてみる。

There is a rectangle whose length is $\frac{3}{5}$ m and area is $\frac{7}{2}$ m². How many meters is the width?

Mayroong rectangle na may haba ng $\frac{3}{5}$ m at may kasakupan na $\frac{7}{2}$ m². Ilang m ang lapad nito?

[Formula] (area) ÷ (length) =

$$\frac{\boxed{}}{\boxed{}} \div \frac{\boxed{}}{\boxed{}} = \frac{\boxed{} \times \boxed{}}{\boxed{} \times \boxed{}}$$

$$= \frac{\boxed{}}{\boxed{}}$$

(Answer) width m

Calculate the following division.

Kalkulahin ang mga sumusunod na division.

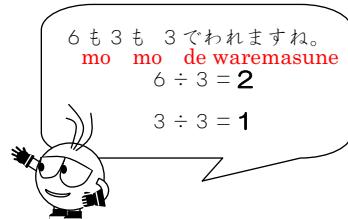

$$\frac{3}{8} \div \frac{5}{7}$$

4

(分数) ÷ (分数) でも約分してから計算する方法が使えることを知る。

$\frac{6}{7} \div \frac{3}{5}$ の けいさんを しましょう。
no keesan o shimashoo

$$\begin{aligned}\frac{6}{7} \div \frac{3}{5} &= \frac{\cancel{6} \times 5}{7 \times \cancel{3}} \\ &= \frac{\boxed{2} \times 5}{7 \times \cancel{3}} \\ &\quad \boxed{1}\end{aligned}$$

 $= \underline{\hspace{2cm}}$ 

つぎのわりざんを しましょう。

$$\textcircled{1} \quad \frac{6}{7} \div \frac{5}{7} = \frac{\underline{\hspace{1cm}} \times}{\times}$$

$$\textcircled{2} \quad \frac{3}{8} \div \frac{3}{4} = \underline{\hspace{2cm}}$$

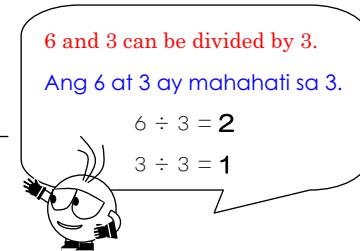

$$\textcircled{3} \quad \frac{3}{5} \div \frac{6}{35} = \underline{\hspace{2cm}}$$

4

(分数) ÷ (分数) でも約分してから計算する方法が使えることを知る。

Calculate $6/7 \div 3/5$.
Kalkulahin ang $6/7 \div 3/5$.

$$\begin{aligned}\frac{6}{7} \div \frac{3}{5} &= \frac{\cancel{6} \times 5}{7 \times \cancel{3}} \\ &= \frac{\boxed{2} \times 5}{7 \times \cancel{3}} \\ &\quad \boxed{1}\end{aligned}$$

 $= \underline{\hspace{2cm}}$ 

Calculate the following division.

Kalkulahin ang mga sumusunod na division.

$$\textcircled{1} \quad \frac{6}{7} \div \frac{5}{7} = \frac{\underline{\hspace{1cm}} \times}{\times}$$

$$\textcircled{2} \quad \frac{3}{8} \div \frac{3}{4} = \underline{\hspace{2cm}}$$

$$\textcircled{3} \quad \frac{3}{5} \div \frac{6}{35} = \underline{\hspace{2cm}}$$

Menseki waru tate yoko
(めんせき) ÷ (たて) = (よこ)

$$6 \div \frac{5}{7} =$$

6をぶんすうになおしましょう。
o bunssuu ni shimashoo
ぶんぽ(した)を1にすればいいのでしたね。
Bunpo (shita) o ni sureba ii nodeshita ne

$$6 \Rightarrow \frac{6}{1}$$

$$\frac{6}{1} \div \frac{5}{7} = \frac{6 \times 7}{1 \times 5}$$

=

$$\textcircled{1} \ 6 \rightarrow \frac{6}{1} \quad \textcircled{2} \ \div \rightarrow \times \quad \textcircled{3} \ \frac{5}{7} \cancel{\times} \frac{7}{5}$$

ぶんぽ(した)は1。÷は×に。ひっくりかえします。
Bunpo (shita) wa Waru wa kakeru ni Hikuri kaeshimasu

2

整数÷分数の計算場面に慣れる。

There is a rectangle whose length is $5/7\text{m}$ and area is 6m^2 . How many meters is the width?

Mayroong rectangle na may haba ng $5/7\text{m}$ at may kasakupan na 6m^2 . Ilang m ang lapad nito?

(area/kasakupan) ÷ (length/haba) = (width/lapad)

$$6 \div \frac{5}{7} =$$

Change 6 into fraction.

Ayusin ang 6 sa fraction.

The denominator (below) should be 1.

Kailangang ayusin ang denominator (babá) sa 1.

$$6 \Rightarrow \frac{6}{1}$$

$$\frac{6}{1} \div \frac{5}{7} = \frac{6 \times 7}{1 \times 5}$$

=

$$\textcircled{1} \ 6 \rightarrow \frac{6}{1} \quad \textcircled{2} \ \div \rightarrow \times \quad \textcircled{3} \ \frac{5}{7} \cancel{\times} \frac{7}{5}$$

The denominator (below) is 1. Change ÷ into ×. Turn upside down (reciprocal).

Ang denominator (babá) ay 1. Palitan ang ÷ ng ×. Baliktarin.

3

整数÷分数の計算に慣れる①

つぎのけいさんをしましょう。
Tsugi no keisan o shimashoo.

$$\begin{aligned} \textcircled{1} \quad 5 \div \frac{7}{9} &= \frac{\boxed{}}{1} \div \frac{7}{9} \\ &= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}} \\ &= \frac{\boxed{}}{\boxed{}} \end{aligned}$$

$$\begin{aligned} \textcircled{2} \quad 6 \div \frac{8}{3} &= \frac{\boxed{}}{1} \div \frac{8}{3} \\ &= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}} \end{aligned}$$

6も8も2でわれますね。
mo mo de waremasune
 $6 \div 2 = 3$
 $8 \div 2 = 4$

$$= \frac{\boxed{}}{\boxed{}}$$

3

整数÷分数の計算に慣れる①

Calculate the following.

Kalkulahin ang mga sumusunod.

$$\begin{aligned} \textcircled{1} \quad 5 \div \frac{7}{9} &= \frac{\boxed{}}{1} \div \frac{7}{9} \\ &= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}} \\ &= \frac{\boxed{}}{\boxed{}} \end{aligned}$$

$$\begin{aligned} \textcircled{2} \quad 6 \div \frac{8}{3} &= \frac{\boxed{}}{1} \div \frac{8}{3} \\ &= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}} \end{aligned}$$

6 and 8 can be divided by 2.
Ang 6 at 8 ay mahahati sa 2.
 $6 \div 2 = 3$
 $8 \div 2 = 4$

$$= \frac{\boxed{}}{\boxed{}}$$

4

整数÷分数の計算に慣れる②

つぎのけいさんをしましょう。

$$\textcircled{1} \quad 15 \div \frac{10}{7} = \frac{\boxed{}}{1} \div \frac{10}{7}$$

$$= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}}$$

$$= \frac{\boxed{}}{\boxed{}}$$

$$\textcircled{2} \quad 6 \div \frac{3}{2} = \frac{\boxed{}}{1} \div \frac{3}{2}$$

$$= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}}$$

$$= \frac{\boxed{}}{1}$$

$$= \boxed{}$$

ぶんば(した)が1です。
Bunbo (shita) ga desu
ということは...
to youu kotowa

4

整数÷分数の計算に慣れる②

Calculate the following.

Kalkulahin ang mga sumusunod.

$$\textcircled{1} \quad 15 \div \frac{10}{7} = \frac{\boxed{}}{1} \div \frac{10}{7}$$

$$= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}}$$

$$= \frac{\boxed{}}{\boxed{}}$$

$$\textcircled{2} \quad 6 \div \frac{3}{2} = \frac{\boxed{}}{1} \div \frac{3}{2}$$

$$= \frac{\boxed{} \times \boxed{}}{1 \times \boxed{}}$$

$$= \frac{\boxed{}}{1}$$

$$= \boxed{}$$

The denominator (below) is 1.
So...

Ang denominator ay 1.
Kaya...

21 ぶんすうの ばい ①

N倍の求め方の確認をし、分数で倍を表す場面を知る。

1

Remember how to calculate "times".

Tandaang muli kung paano kalkulahin ang "beses".

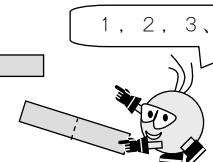

How many times of 2m is 8m?

Ilang beses ng 2m ang 8m?

1, 2, 3, 4.

8 m

2 m

$$(\text{Formula}) \quad 8 \div 2 =$$

(Answer) 4 times

① How many times of 3m is 4m?

Ilang beses ng 3m ang 4m?

4 m

3 m

They cannot be divided.
Hindi mahahati.

The answer should
be fraction.
Dapat sa fraction
ang sagot.

$$(\text{Formula}) \quad 4 \div 3 =$$

$$(\text{Answer}) \quad \frac{4}{3} \text{ times}$$

$$4 \div 3 = \frac{4}{3}$$

② How many times of 2m is 5m?

Ilang beses ng 2m ang 5m?

5 m

2 m

(Formula)

(Answer)

2

元にする数の方が小さい場合でも「N倍」と表し、分数表示もできることを知る。

2 mは 5 mの なんばいでしょうか。
wa no nanbai deshooka

Ni meetoru no hoo ga
chiisai nomi
“Nanbai”

2 m

5 m

$$(しき) \quad 2 \div 5 = \frac{\square}{\square}$$

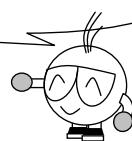

$$(こたえ) \quad \frac{2}{5} \text{ ばい}$$

2 mの ほうが
ちいさいのに…。

① 3 mは 4 mの なんばいですか。
wa no nanbai desuka

3 m

4 m

(しき)

(こたえ)

2

元にする数の方が小さい場合でも「N倍」と表し、分数表示もできることを知る。

How many times of 5m is 2m?

Ilang beses ng 5m ang 2m?

2 m

5 m

$$(Formula) \quad 2 \div 5 = \frac{\square}{\square}$$

$$(Answer) \quad \frac{2}{5} \text{ times}$$

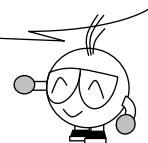

But 2m is smaller...
Ngunit mas malit
ang 2m...

You can also change
this into fraction.
Maaayos din ito sa
fraction.

The question is how many "times" of the larger number the smaller one is.
It sounds strange.
Ang tanong ay kung ilang "beses" ng mas malaki ang mas maliti.
Mukhang mali ito.
But remember this kind of question because it is common in mathematics.
Ngunit tandaan ang ganitong suliranin dahil pangkaraniwan ito sa
matematika.

① How many times of 4m is 3m?

Ilang beses ng 4m ang 3m?

3 m

4 m

(Formula)

(Answer)

22 ぶんすうの ばい ②

N倍の求め方の確認を確認する。

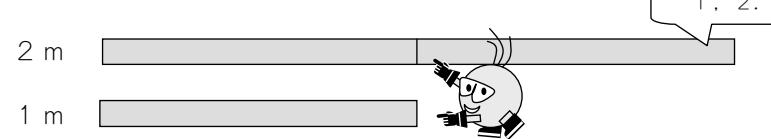

1

Remember how to calculate "times".

Tandaang muli kung paano kalkulahan ang "beses".

How many times of 1m is 2m?

Ilang beses ng 1m ang 2m?

1, 2.

$$(\text{Formula}) \quad 2 \div 1 = \quad (\text{Answer}) \quad 2 \text{ times}$$

How many times of 2m is 1m?

Ilang beses ng 2m ang 1m?

But 1m is smaller...
Ngunit mas maliliit ang 1m...

$$(\text{Formula}) \quad 1 \div 2 =$$

How many times in this question was also solved by calculating $1 \div 2$.
Nalaman din ito sa pagkalkula ng $1 \div 2$.

$$(\text{Answer}) \quad \frac{1}{2} \text{ times} \quad 1 \div 2 = \frac{1}{2}$$

"How many times of ■ is ●?" can be solved by calculating $\bullet \div \blacksquare$.

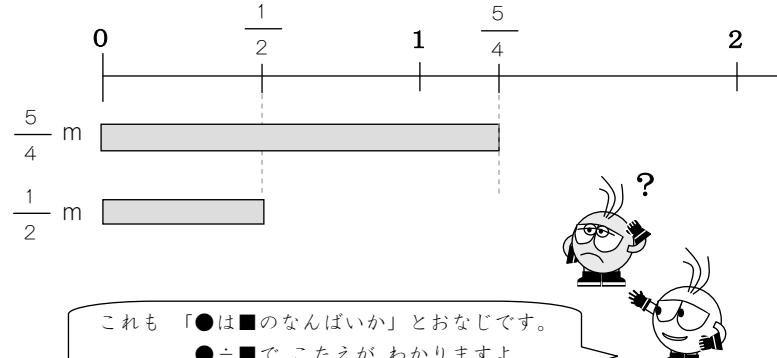

"Ilang beses ng ■ ang ●?" ay malalaman sa pagkalkula ng $\bullet \div \blacksquare$.

2

分数と分数を比べて何倍かを求める場面を知る。

$\frac{5}{4}$ m は $\frac{1}{2}$ m の なんばいですか。
wa no nanbai desuka

Koremo "Maru wa Shikaku no nanbai ka" to onaji desu
Maru waru Shikaku de kotaе ga wakarimasu

$\frac{5}{4}$ m は $\frac{1}{2}$ m の なんばいですか。
wa no nanbai desuka

$$\begin{aligned} & \frac{5}{4} \div \frac{1}{2} \\ &= \frac{5}{4} \times \frac{2}{1} \end{aligned}$$

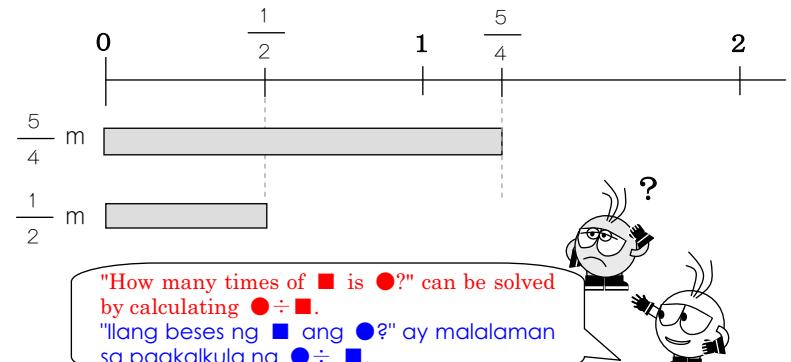

$$\begin{aligned} &= \frac{5}{4} \times \cancel{\frac{2}{2}}^1 \\ &= \frac{5}{2} \end{aligned}$$

(こたえ) $\frac{5}{2}$ bai
kotaе

2

分数と分数を比べて何倍かを求める場面を知る。

How many times of $1/2$ m is $5/4$ m?
Ilang beses ng $1/2$ m ang $5/4$ m?

How many times of $1/2$ m is $5/4$ m?
Ilang beses ng $1/2$ m ang $5/4$ m?

$$\begin{aligned} & \frac{5}{4} \div \frac{1}{2} \\ &= \frac{5}{4} \times \frac{2}{1} \end{aligned}$$

$$\begin{aligned} &= \frac{5}{4} \times \cancel{\frac{2}{2}}^1 \\ &= \frac{5}{2} \end{aligned}$$

$$\begin{aligned} & \div \frac{1}{2} \\ & \times \frac{2}{1} \end{aligned}$$

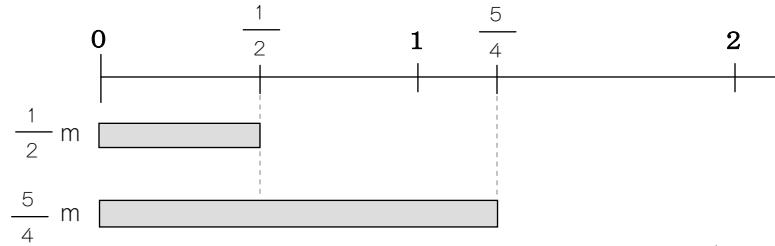

$2 = 2 \times 1$ It can be reduced.
 $4 = 2 \times 2$ Maaaring i-reduce.

(Answer) $\frac{5}{2}$ times

3

数と分数を比べて何倍かを求める問題を解いてみる①

$\frac{1}{2}$ m は $\frac{5}{4}$ m の なんばいですか。
wa no nanbai desuka

これも 「●は■のなんばいか」 ので、
● ÷ ■ で こたえが わかりますね。

(しき)

$$\frac{1}{2} \div \frac{5}{4}$$

$$= \frac{1}{2} \times \frac{\square}{\cancel{5}} \quad \times \frac{\cancel{4}}{2}$$

$$\div \frac{5}{4} \rightarrow \times \frac{4}{5}$$

4 = 2 × 2 やくぶん
2 = 2 × 1 できます。

$$= \frac{\square}{2} \times \frac{4}{\cancel{2}}$$

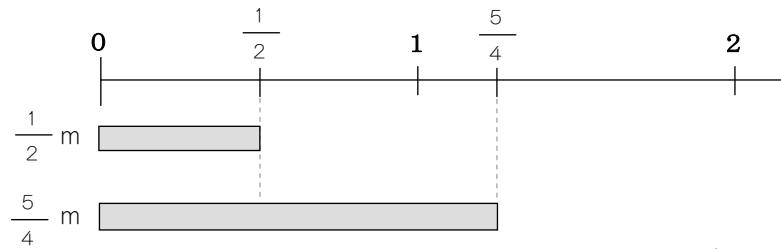

(こたえ)

ばい

3

数と分数を比べて何倍かを求める問題を解いてみる①

How many times of $\frac{5}{4}$ m is $\frac{1}{2}$ m?Ilang beses ng $\frac{5}{4}$ m ang $\frac{1}{2}$ m?

"How many times of ■ is ●?" can be solved by calculating ● ÷ ■.

"Ilang beses ng ■ ang ●?" ay malaman sa pagkalkula ng ● ÷ ■.

(Formula)

$$\frac{1}{2} \div \frac{5}{4}$$

$$= \frac{1}{2} \times \frac{\square}{\cancel{5}} \quad \times \frac{\cancel{4}}{2}$$

$$\div \frac{5}{4} \rightarrow \times \frac{4}{5}$$

4 = 2 × 2 It can be reduced.
2 = 2 × 1 Maaaring i-reduce.

$$= \frac{\square}{2} \times \frac{4}{\cancel{2}}$$

(Answer)

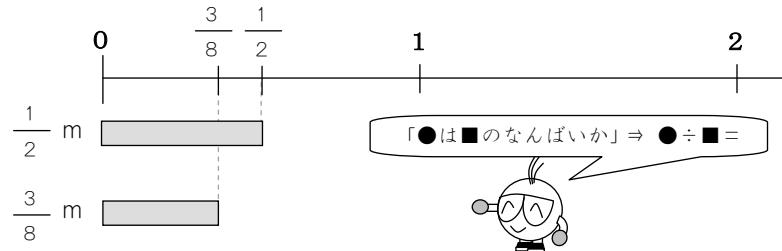

times

4

数と分数を比べて何倍かを求める問題を解いてみる②

$\frac{1}{2}$ m は $\frac{3}{8}$ m の なんばいですか。
wa no nanbai desuka

(しき) ÷

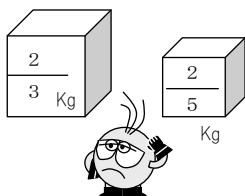

× =

(こたえ) ぱい

では、おもさで なんばいかを かんがえてみましょう。
Dewa omosa de nanbai ka o kangaete mimashoo

$\frac{2}{3}$ Kg は $\frac{2}{5}$ kg の なんばいですか。
Sanbun no ni kiroguramu wa no nanbai desuka

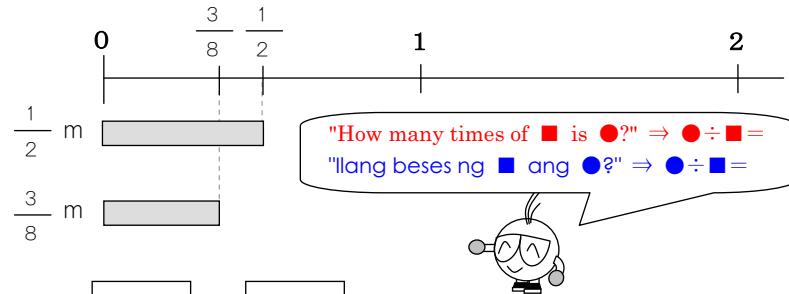

÷
 × =

4

数と分数を比べて何倍かを求める問題を解いてみる②

How many times of $\frac{3}{8}$ m is $\frac{1}{2}$ m?
Ilang beses ng $\frac{3}{8}$ m ang $\frac{1}{2}$ m?

(Formula) ÷

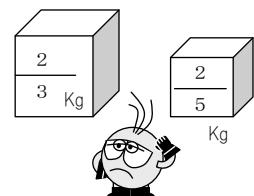

× =

(Answer) times

Then think how many times it is in weight.

Ngayon pag-isipan kung ilang beses sa kabigatan.

How many times of $\frac{2}{5}$ kg is $\frac{2}{3}$ kg?
Ilang beses ng $\frac{2}{5}$ kg ang $\frac{2}{3}$ kg?

÷
 × =

bai ni narimasu

hanbun ni narimasu

24 わりざんの ぶんしょうだい ①

ペンキの量と塗れる面積の関係を理解する。

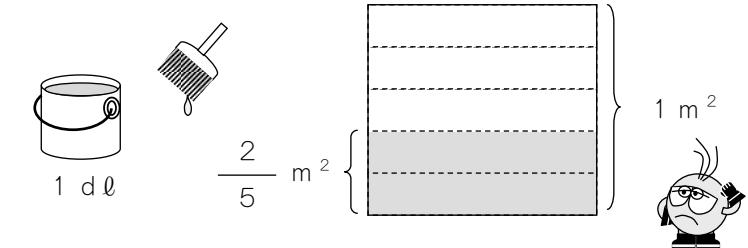

1

There is paint, 1dl of which is enough to paint $2/5 \text{ m}^2$ of board.

Mayroong pintura na 1dl nito ay makakulay ng $2/5 \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 2dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 2dl na pinturang ito?

Look at the table and answer.

Tignan ang table at sagutin.

amount of paint dami ng pintura	1 dl	→	2 dl
area that can be painted kasakupang makukulayan	$\frac{2}{5} \text{ m}^2$	→	

① First 1dl. Next 2dl.

Una ay 1dl at pagkatapos ay 2dl.

How many times of the first paint is the second one?

Naging ilang beses na ang pintura?

② How will the area that can be painted change when the amount of paint doubles?

Kapag ang dami ng pintura ay naging 2 beses, paano magbabago ang kasakupang makukulayan?

(ア) It doubles. / Magiging 2 beses. (イ) It becomes half. / Magiging kalahati.

③ $\frac{2}{5} \text{ m}^2$ の 2 倍は なん m^2 ですか。
no bai wa nan desuka

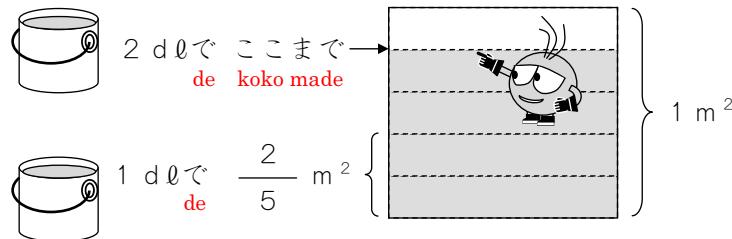

(しき)

④ えで たしかめてみましょう。
E de tashikamete mimashoo

(Answer)

④ Check with the diagram.
Suriin ito sa diagram.

⑤ 3 dl では なん m^2 ねれるでしょく。
dewa nan nurerudeshooka

ペンキのりょう Penki no ryoo	1 dl	\rightarrow	3 dl
ねれるひろさ Nureru hirosa	$\frac{2}{5} \text{ m}^2$		

1 dl のときより なんばい ねれますか。
no toki yori nan bai nuremasuka

しきと こたえを かきましょう。
Shiki to kotae o kakimashoo

How many m^2 can be painted with 3dl?
⑤ Ilang m^2 ang makukulayan ng 3dl ?

amount of paint dami ng pintura	1 dl	\rightarrow	3 dl
area that can be painted kasakupang makukulayan	$\frac{2}{5} \text{ m}^2$		

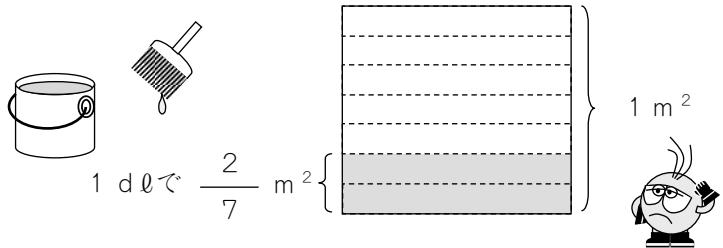

How many times of area painted with 1dl can be painted with 3dl?
Ilang beses ng kasakupang makukulayan sa 1dl ang kasakupang makukulayan sa 3dl?
Write the math formula and the answer.
Isulat ang math formula at sagotin.

2

分数を整数倍する「ペンキと板」の問題を解いてみる。

1 dlでいたを $\frac{2}{7} \text{ m}^2$ ぬれるペンキがあります。

このペンキ3dlでは、いたをなん m^2 ぬれますか。

ひょうをみて、こたえましょう。

ペンキのりょう	1 dl	→	3 dl
ぬれるひろさ	$\frac{2}{7} \text{ m}^2$	→	

①はじめは1dlです。つぎは3dlです。

ペンキはなんばいになりましたか。

② $\frac{2}{7} \text{ m}^2$ の3ばいはなん m^2 ですか。

(しき)

(こたえ)

2

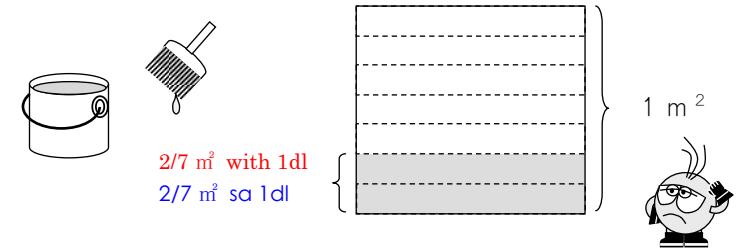

分数を整数倍する「ペンキと板」の問題を解いてみる。

There is paint, 1dl of which is enough to paint $2/7 \text{ m}^2$ of board.

Mayroong pintura na 1dl nito ay makakakulay ng $2/7 \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 3dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 3dl na pinturang ito?

Look at the table and answer.

Tignan ang table at sagutin.

amount of paint dami ng pintura	1 dl	→	3 dl
area that can be painted kasakupang makukulayan	$\frac{2}{7} \text{ m}^2$	→	

① First 1dl. Next 3dl.

Una ay 1dl at pagkatapos ay 3dl.

How many times of the first paint is the second one?

Naging ilang beses na ang pintura?

② How many m^2 is three times of $2/7 \text{ m}^2$?

Ilang m^2 ang 3 beses ng $2/7 \text{ m}^2$?

(Formula)

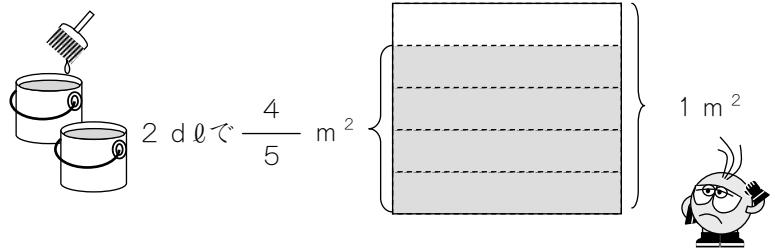

(Answer)

3

分数を整数で割る「ペンキと板」の問題を知る。

2 dlでいたを $\frac{4}{5} \text{ m}^2$ ぬれる ペンキが あります。

この ペンキ 1 dlでは、いたを なん m^2 ぬれますか。

ひょうをみて、こたえましょう。

ペンキのりょう	2 dl	→	1 dl
ぬれるひろさ	$\frac{4}{5} \text{ m}^2$	→	

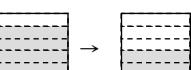

はじめは 2 dlです。つぎは 1 dlです。
Hajime wa desu Tsugi wa desu

ペンキは はんぶんになりました。

Penki wa hanbun ni narimashita

ぬれるひろさも はんぶんになりますね。
Nureru hirosa mo hanbun ni narimasu ne

$\frac{4}{5} \text{ m}^2$ を はんぶんに しましょう。

はんぶんだから、
2でわります。

$$(しき) \quad \frac{4}{5} \div 2 =$$

(こたえ)

3

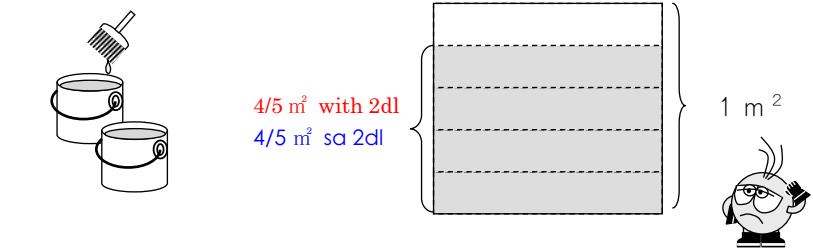

分数を整数で割る「ペンキと板」の問題を知る。

There is paint, 2dl of which is enough to paint $4/5 \text{ m}^2$ of board.

Mayroong pintura na 2dl nito ay makakulay ng $4/5 \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 1dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 1dl na pinturang ito?

Look at the table and answer.

Tignan ang table at sagutin.

amount of paint dami ng pintura	2 dl	→	1 dl
area that can be painted kasakupang makukulayan	$\frac{4}{5} \text{ m}^2$	→	

First 2dl. Next 1dl.

Una ay 2dl at pagkatapos ay 1dl.

The paint became half.

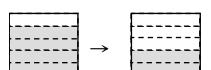

Ang pintura ay naging kalahati.

The area that can be painted also becomes half.

Ang kasakupang makukulayan ay magiging kalahati din.

Reduce $4/5 \text{ m}^2$ to half.

Hatiin ang $4/5 \text{ m}^2$.

Divide it by 2 to reduce it to half.
Hatiin ito sa 2 upang maging kalahati ito.

$$(Formula) \quad \frac{4}{5} \div 2 =$$

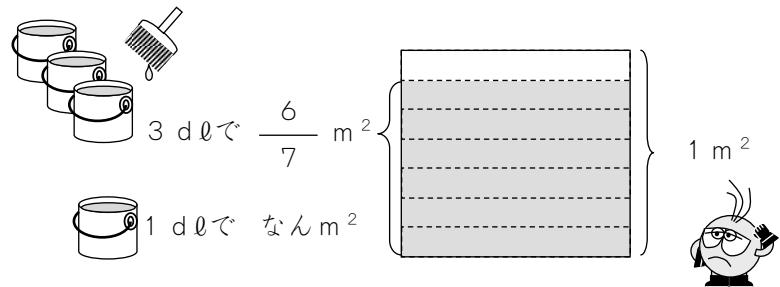

(Answer)

4

分数を整数で割る「ペンキと板」の問題を解いてみる。

3 dlでいたを $\frac{6}{7} \text{ m}^2$ ぬれるペンキがあります。

このペンキ 1 dlでは、いたを なん m^2 ぬれますか。

ひょうをみて、こたえましょう。

ペンキのりょう	3 dl	\rightarrow	1 dl
ぬれるひろさ	$\frac{6}{7} \text{ m}^2$	\rightarrow	

①はじめは 3 dlです。つぎは 1 dlです。

Hajime wa desu Tsugi wa desu

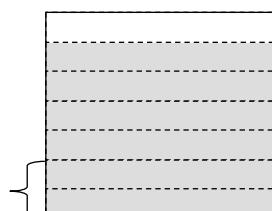

3 dlを 3でわると 1 dlになりますね。
o de waruto ni narimasune

②ぬれるひろさ $\frac{6}{7} \text{ m}^2$ も 3でわりましょう。

Nureru hirosa $\frac{6}{7} \text{ m}^2$ mo de warimashoo

(しき)

(こたえ)

4

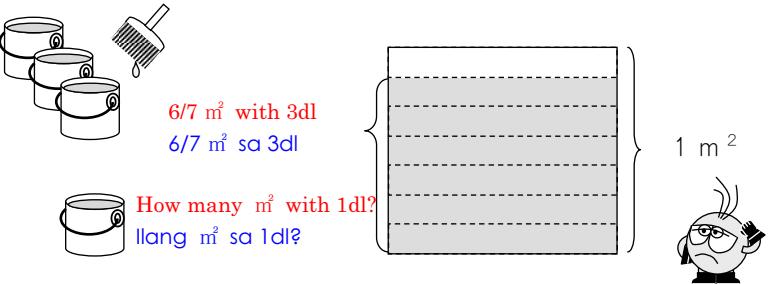

分数を整数で割る「ペンキと板」の問題を解いてみる。

There is paint, 3dl of which is enough to paint $6/7 \text{ m}^2$ of board.

Mayroong pintura na 3dl nito ay makakakulay ng $6/7 \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 1dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 1dl na pinturang ito?

Look at the table and answer.

Tignan ang table at sagutin.

amount of paint dami ng pintura	3 dl	\rightarrow	1 dl
area that can be painted kasakupang makukulayan	$\frac{6}{7} \text{ m}^2$	\rightarrow	

① First 3dl. Next 1dl.

Una ay 3dl at pagkatapos ay 1dl.

If 3dl is divided by 3, the answer is 1dl.

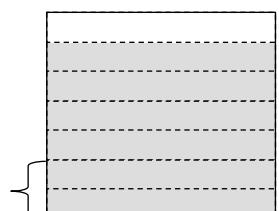

Kapag ang 3dl ay hinati sa 3, 1dl ang sagot.

② Also divide $6/7 \text{ m}^2$, the area that can be painted, by 3.

Hatiin din sa 3 ang $6/7 \text{ m}^2$ na kasakupang makukulayan.

(Formula)

1

There is paint, $3/4 \text{ dl}$ of which is enough to paint $2/5 \text{ m}^2$ of board.

Mayroong pintura na $3/4 \text{ dl}$ nito ay makakakulay ng $2/5 \text{ m}^2$ ng tabla.

1 dl of this paint was used. How many m^2 was painted?

Ginamit ang 1 dl ng pinturang ito. Ilang m^2 ang nakulayan nito?

paint pintura	$\frac{3}{4} \text{ dl}$	→	1 dl
area lawak	$\frac{2}{5} \text{ m}^2$	→	

The amount of the paint increased, so the painted area also increased.

Ang dami ng pintura ay naragdagan kaya ang kasakupang nakulayan ay naragdagan din.

Calculate how much increased.

Kalkulahin kung gaano karami ang naragdagan. How many times of the original is it?

amount increased ÷ original amount = Ilang beses ng pinagmulang dami naragdagang dami ÷ pinagmulang dami ito?

1 dl	÷	$\frac{3}{4} \text{ dl}$	$= \frac{4}{3}$ times
----------------	---	--------------------------	-----------------------

The area that can be painted also becomes $4/3$ times, so it becomes ...

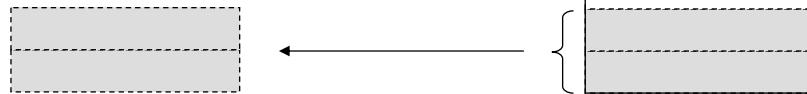

Ang kasakupang makulayan ay magiging $4/3$ beses kaya magiging...

$8/15 \text{ m}^2$ by calculating $2/5 \text{ m}^2 \times 4/3$.

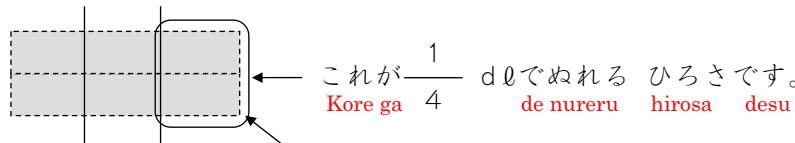

$8/15 \text{ m}^2$ sa pagkalkula ng $2/5 \text{ m}^2 \times 4/3$.

えで たしかめてみましょう。

wa hakko arimasu

だから、1 d ℓ で ぬれる ひろさは $\frac{8}{15} \text{ m}^2$ です。
Dakara de nureru hirosa wa $\frac{8}{15} \text{ m}^2$ desu

けいさんした こたえと おなじですね。
Keesan shita kotae to onaji desune

Check with the diagram.

Suriin ito sa diagram.

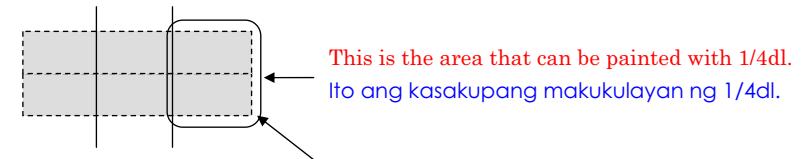

This is $2/5 \text{ m}^2$ that can be painted with $3/4\text{dl}$ of paint.

Ito ay $2/5 \text{ m}^2$ na makukulayan ng $3/4\text{dl}$.

You can solve the area that can be painted with $1/4\text{dl}$ by dividing this by 3.

Kapag hinati ito sa 3, malalaman ang kasakupang makukulayan ng $1/4\text{dl}$.

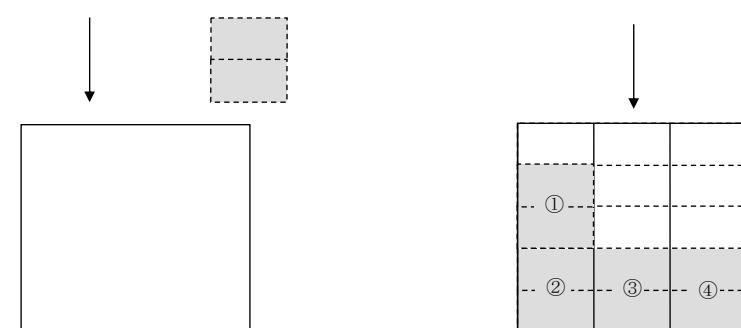

Because 1dl is $4/4\text{dl}$, 4 pieces of this are needed.

Ang 1dl ay $4/4\text{dl}$ kaya kailangang 4 na bahagi nito.

If 4 pieces of this are painted to 1 m^2 of board, the board changes like this.

Kapag kinulayan ang 4 na bahagi nito sa 1 m^2 na tabla, ganito magbabago ang tabla.

There are 15 [] in all.
Mayroong 15 [] ang lahat.

There are 8 []
Mayroong 8 []

So the area that can be painted with 1dl is $8/15 \text{ m}^2$.

Kaya ang kasakupang makukulayan ng 1dl ay $8/15 \text{ m}^2$.

The answer is the same with that solved in calculation.

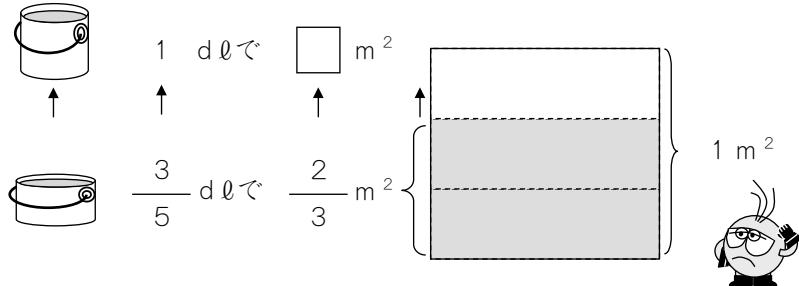

Pareho ang sagot sa nalaman sa pagkakalkula.

2

分数÷分数の計算になる「ペンキと板」の問題を解いてみる。

$\frac{3}{5}$ dlでいたを $\frac{2}{3}$ m²ぬれるペンキがあります。

このペンキを1dlつかいました。なんm²ぬれましたか。

ペンキ Penki	$\frac{3}{5}$ dl	→	1 dl
ひろさ Hirosa		m ² →	

ペンキのりょうがなんばいになったのかをしらべます。
Penki no ryoo ga nanbai ni natta noka o shirabemasu

$$1 \div \frac{3}{5} = \boxed{\frac{5}{3}}$$

だから、ぬれるひろさも $\frac{5}{3}$ 倍します。
Dakara nureru hirosa mo $\frac{5}{3}$ bai shimasu

$$(しき) \frac{2}{3} \times \boxed{\frac{5}{3}} =$$

(こたえ)
kotae

2

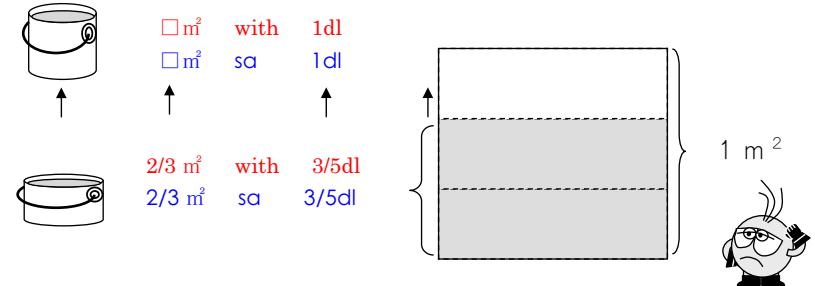

分数÷分数の計算になる「ペンキと板」の問題を解いてみる。

There is paint, $\frac{3}{5}$ dl of which is enough to paint $\frac{2}{3}$ m² of board.

Mayroong pintura na $\frac{3}{5}$ dl nito ay makakulay ng $\frac{2}{3}$ m² ng tabla.

1dl of this paint was used. How many m² was painted?

Ginamit ang 1dl ng pinturang ito. Ilang m² ang nakulayan nito?

paint pintura	$\frac{3}{5}$ dl	→	1 dl
area lawak		m ² →	

Find out how many times of the original amount of paint is the second one.
Suriin kung ilang beses ng pinagmulang dami ng pintura ang dami nito.

$$1 \div \frac{3}{5} = \boxed{\frac{5}{3}}$$

So the area that can be painted should also be made $\frac{5}{3}$ times.
Kaya ang kasakupang makukulayan din ay gagawing $\frac{5}{3}$ beses.

$$(Formula) \frac{2}{3} \times \boxed{\frac{5}{3}} =$$

(Answer)

このもんだいのかんたんなときかたがあります。

$$\frac{4}{5} \div 1 = \frac{4}{5 \times 1} = \frac{4}{5} \quad (\text{こたえ}) \frac{4}{5} \text{ m}^2$$

27 わりざんの ぶんしょうだい ④

「分数×整数」の場面を「トウカーノ式」で解く。(24課の[1]と同じ問題)

1

There is paint, 1dl of which is enough to paint $\frac{2}{5} \text{ m}^2$ of board.

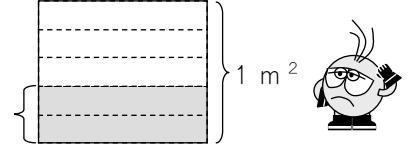

Mayroong pintura na 1dl nito ay makakakulay ng $\frac{2}{5} \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 2dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 2dl na pinturang ito?

$\frac{2}{5} \text{ m}^2$ with 1dl
 $\frac{2}{5} \text{ m}^2$ sa 1dl

The following is an easy way.

Ang sumusunod ay madaling paraan.

- ① First write the numbers in the table.
Una, isulat ang bilang sa table.

First → Next

amount of paint dami ng pintura (dl)	1	2
area that can be painted kasakupang makukulayan (m^2)	$\frac{2}{5}$	

Next multiply one number by the other encircled diagonally.

- ② Sunod ay multiplikahin ang isang bilang sa isa pang bilang na napalibutan ng pabilog na dayagonal.

First → Next

amount of paint dami ng pintura (dl)	1	2
area that can be painted kasakupang makukulayan (m^2)	$\frac{2}{5}$	

- ③ Then
Pagkatapos

divide $\frac{4}{5}$ by the left number "1" and that's all.

hatiin ang $\frac{4}{5}$ sa natirang bilang "1" at tapos na.

$\frac{2}{5} \times 2 = \frac{4}{5}$

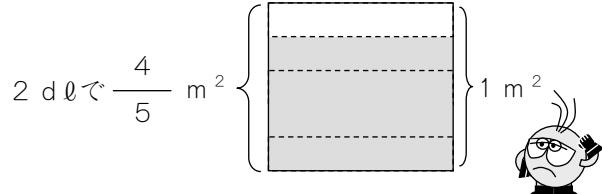

$$\frac{4}{5} \div 1 = \frac{4}{5 \times 1} = \frac{4}{5} \quad (\text{Answer}) \quad \frac{4}{5} \text{ m}^2$$

2

「分数÷整数」の場面を「トウカーノ式」で解く。(24課の3と同じ問題)

2 dlでいたを $\frac{4}{5} \text{ m}^2$ ぬれるペンキがあります。

このペンキ 1 dlでは、いたを なん m^2 ぬれますか。

これも 1 と おなじ かんたんな ほうほうで けいさんできます。
Kore mo to onaji kantan na hooohoo de keesan dekimasu

①まず、ひょうにかずをかきます。

はじめ → つぎ

ペンキのりょう (dl)	2	1
ぬれるひろさ (m^2)	$\frac{4}{5}$	

②つぎに、ななめにまるでかこんだかずとかずをかけます。

$$\frac{4}{5} \times 1 = \frac{4}{5}$$

③あとは、これをのこったかず「2」でわればおしまいです。

Ato wa kore o nokotta kazu de wareba oshimai desu

$$\frac{4}{5} \div 2 = \frac{4}{5 \times 2} = \frac{2}{5}$$

(こたえ) $\frac{2}{5} \text{ m}^2$

2

「分数÷整数」の場面を「トウカーノ式」で解く。(24課の3と同じ問題)

There is paint, 2dl of which is enough to paint $\frac{4}{5} \text{ m}^2$ of board.

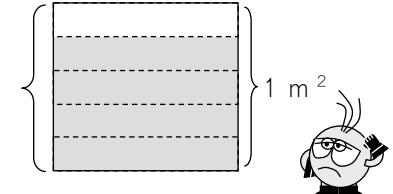

Mayroong pintura na 2dl nitong ay makakulay ng $\frac{4}{5} \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with 1dl of this paint?

Ilang m^2 ng tabla ang makukulayan ng 1dl na pinturang ito?

$\frac{4}{5} \text{ m}^2$ with 2dl
 $\frac{4}{5} \text{ m}^2$ sa 2dl

This can also be calculated with the same easy way as 1.

Makakalkula din ito sa madaling paraan katulad ng sa 1.

① First write the numbers in the table.

Una, isulat ang bilang sa table.

First → Next

amount of paint dami ng pintura (dl)	2	1
area that can be painted kasakupang makukulayan (m^2)	$\frac{4}{5}$	

Next multiply one number by the other encircled diagonally.

② Sunod ay multiplikahin ang isang bilang sa isa pang bilang na napalibutan ng pabilog na dayagonal.

$$\frac{4}{5} \times 1 = \frac{4}{5}$$

③ Then divide this by the left number "2" and that's all.

Pagkatapos hatiin ito sa natirang bilang "2" at tapos na.

$$\frac{4}{5} \div 2 = \frac{4}{5 \times 2} = \frac{2}{5}$$

(Answer) $\frac{2}{5} \text{ m}^2$

3

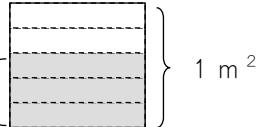

「分数×分数」の場面を「トウカーノ式」で解く。(25課の①と同じ問題)

1 dlでいたを $\frac{3}{5} \text{ m}^2$ ぬれるペンキがあります。

このペンキ $\frac{1}{2} \text{ dl}$ では、いたを なん m^2 ぬれますか。

1 dlで $\frac{3}{5} \text{ m}^2$

1 m^2

これも ① と おなじ かんたんな ほうほうで けいさんできます。

①まず、ひょうに かずを かきます。

はじめ → つぎ

ペンキのりょう (dl)	1	$\frac{1}{2}$
ぬれるひろさ (m^2)	$\frac{3}{5}$	

②つぎに、ななめにまるでかこんだかずとかずをかけます。

$$\frac{3}{5} \times \frac{1}{2} = \frac{\boxed{}}{\boxed{}}$$

③あとは、これをのこったかず「1」でわればおしまいです。

$$\frac{\boxed{}}{\boxed{}} \div 1 = \frac{\boxed{}}{\boxed{}} \times 1 = \frac{\boxed{}}{\boxed{}}$$

(こたえ) $\frac{\boxed{}}{\boxed{}} \text{ m}^2$

3

「分数×分数」の場面を「トウカーノ式」で解く。(25課の①と同じ問題)

There is paint, 1dl of which is enough to paint $3/5 \text{ m}^2$ of board.

Mayroong pintura na 1dl nito ay makakakulay ng $3/5 \text{ m}^2$ ng tabla.

How many m^2 of board can be painted with $1/2\text{dl}$ of this paint?

Ilang m^2 ng tabla ang makukulayan ng $1/2\text{dl}$ na pinturang ito?

$3/5 \text{ m}^2$ with 1dl
 $3/5 \text{ m}^2$ sa 1dl

1 m^2

This can also be calculated with the same easy way as 1.

Makakalkula din ito sa madaling paraan katulad ng sa 1.

① First write the numbers in the table.

Una, isulat ang bilang sa table.

First → Next

amount of paint dami ng pintura (dl)	1	$\frac{1}{2}$
area that can be painted kasakupang makukulayan (m^2)	$\frac{3}{5}$	

Next multiply one number by the other encircled diagonally.

② Sunod ay multiplikahin ang isang bilang sa isa pang bilang na napalibutan ng pabilog na dayagonal.

$$\frac{3}{5} \times \frac{1}{2} = \frac{\boxed{}}{\boxed{}}$$

③ Then divide this by the left number "1" and that's all.
Pagkatapos hatiin ito sa natirang bilang "1" at tapos na.

$$\frac{\boxed{}}{\boxed{}} \div 1 = \frac{\boxed{}}{\boxed{}} \times 1 = \frac{\boxed{}}{\boxed{}}$$

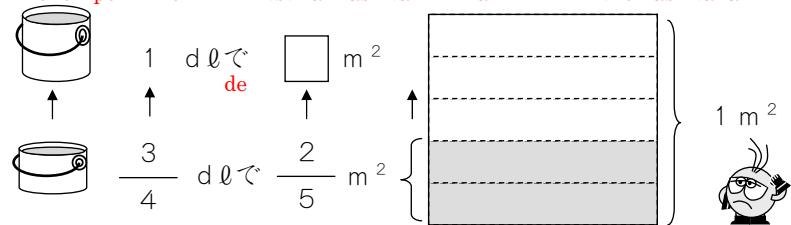

(Answer) $\frac{\boxed{}}{\boxed{}} \text{ m}^2$

4

「分数÷分数」の場面を「トウカーノ式」で解く。(26課の[1]と同じ問題)

$\frac{3}{4}$ dlでいたを $\frac{2}{5}$ m²ぬれるペンキがあります。
deshirittoru de ita o heehoomeetoru nureru penki ga arimasu

このペンキを1dlつかいました。なんm²ぬれましたか。
Kono penki o tsukaimashita nan nuremashitaka

①まず、ひょうにかずをかきます。

はじめ → つぎ

ペンキのりょう (dl)	$\frac{3}{4}$	1
ぬれるひろさ (m ²)	$\frac{2}{5}$	

②つぎに、ななめにまるでかこんだかずとかずをかけます。

$$\frac{2}{5} \times 1 = \frac{\square}{\square}$$

③あとは、これをのこったかず「 $\frac{3}{4}$ 」でわります。
Ato wa kore o nokotta kazu $\frac{3}{4}$ de warimasu

$$\frac{\square}{\square} \div \frac{3}{4} = \frac{\square}{\square} \times 4 = \frac{\square}{\square}$$

(こたえ) $\frac{\square}{\square}$ m²

4

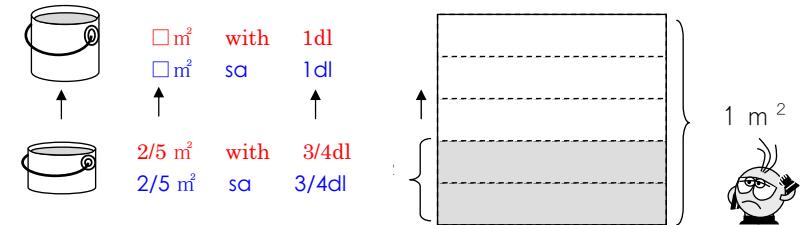

「分数÷分数」の場面を「トウカーノ式」で解く。(26課の[1]と同じ問題)

There is paint, $3/4$ dl of which is enough to paint $2/5$ m² of board.

Mayroong pintura na $3/4$ dl ay makakakulay ng $2/5$ m² ng tabla.

1dl of this paint was used. How many m² was painted?

Ginamit ang 1dl ng pinturang ito. Ilang m² ang nakulayan nito?

① First write the numbers in the table.

Una, isulat ang bilang sa table.

First → Next

amount of paint dami ng pintura (dl)	$\frac{3}{4}$	1
area that can be painted kasakupang makukulayan (m ²)	$\frac{2}{5}$	

Next multiply one number by the other encircled diagonally.

② Sunod ay multiplikahin ang isang bilang sa isa pang bilang na napalibutan ng pabilog na dayagonal.

$$\frac{2}{5} \times 1 = \frac{\square}{\square}$$

③ Then divide this by the left number "3/4".
Pagkatapos hatiin ito sa natirang bilang "3/4".

$$\frac{\square}{\square} \div \frac{3}{4} = \frac{\square}{\square} \times 4 = \frac{\square}{\square}$$

(Answer) $\frac{\square}{\square}$ m²

5

「針金の長さと重さ」の問題に置き換えて「トウカーノ式」で解く。(26課の④と同じ問題)

$\frac{4}{5}$ m の おもさが $\frac{5}{7}$ kg の はりがねが あります。
no omosa ga no harigane ga arimasu

この はりがね 1m では、なん kg になりますか。
Kono harigane dewa nan ni narimasuka

$$\frac{4}{5} \text{ m de } \frac{5}{7} \text{ kg}$$

$$1 \text{ m de } \boxed{} \text{ kg}$$

これも ペンキの もんだいと おなじように かんがえられます。
Kore mo penki no mondai to onaji you ni kangaeraremasu

①まず、ひょうに かずを かきます。
Mazu hyoo ni kazu o kakimasu

はじめ → つぎ

はりがねの ながさ (m) Harigane no nagasa	$\frac{4}{5}$	1
はりがねの おもさ (kg) Harigane no omosa	$\frac{5}{7}$	

②つぎに、ななめに まるで かこんだ かずと かずを かけます。
Tsugini naname ni maru de kakonda kazu to kazu o kakemasu

$$\frac{5}{7} \times 1 = \frac{\boxed{}}{\boxed{}}$$

③あとは、これを のこった かず 「 $\frac{4}{5}$ 」 で わります。
Ato wa kore o nokotta kazu de warimasu

$$\frac{\boxed{}}{\boxed{}} \div \frac{4}{5} = \frac{\boxed{} \times 5}{\boxed{} \times 4} = \frac{\boxed{}}{\boxed{}}$$

$$(こたえ) \frac{\boxed{}}{\boxed{}} \text{ m}^2$$

5

「針金の長さと重さ」の問題に置き換えて「トウカーノ式」で解く。(26課の④と同じ問題)

There is a wire whose weight per 4/5m is 5/7kg.

Mayroong kabigatan ng 4/5m nito ay 5/7kg.

How many kg is 1m of this wire?

Ilang kg ang 1m ng kabad na ito?

5/7kg with 4/5m

5/7kg sa 4/5m

□kg with 1m

□kg sa 1m

This can also be solved in the same way as the problems on paint.

Mapag-iisipan din ito sa parehong paraan ng suliranin sa pintura.

① First write the numbers in the table.

Una, isulat ang bilang sa table.

First → Next

length of the wire haba ng kabad	(m)	$\frac{4}{5}$	1
weight of the wire kabigatan ng kabad	(kg)	$\frac{5}{7}$	

Next multiply one number by the other encircled diagonally.

② Sunod ay multiplikahin ang isang bilang sa isa pang bilang na napalibutan ng pabilog na dayagonal.

$$\frac{5}{7} \times 1 = \frac{\boxed{}}{\boxed{}}$$

③ Then divide this by the left number "4/5".
Pagkatapos hatiin ito sa natirang bilang "4/5".

$$\frac{\boxed{}}{\boxed{}} \div \frac{4}{5} = \frac{\boxed{} \times 5}{\boxed{} \times 4} = \frac{\boxed{}}{\boxed{}}$$

$$(\text{Answer}) \frac{\boxed{}}{\boxed{}} \text{ m}^2$$
